Hillview Farms

Private Treaty Bull Sale

Silent Auction and Open House

February 10, 2018

Lunch at noon • Bids close at 2PM

at the FARM

Selling: 42 Coming 2-Year-Old Polled Hereford Bulls
50 Open Yearling Black Baldy Heifers

Featuring
sons of:

DKF RO Cash
Flow 0245 ET

and

Goble OHR
Full Trust 103A

WELCOME

We have been selling bulls at Hillsview Farms privately for 27 years now. This is our 6th year to have an open house with a set time to introduce bids. Rather than "first come, first serve," we want everyone to have the opportunity to view all the bulls. They will be available for viewing by mid January.

We have been recognized as a Gold TPR (Total Performance Records) Breeder by the American Hereford Association again this year. A 2nd year achievement for us was to be recognized again on the national list of top 20 producers of "Dams of Distinction" in the United States. For cows to achieve this award, they must calve within 30 months of age, maintain a calving interval of 370 days, and have had at least 3 calves with at least a 105 WW ratio.

The sale bulls will all have complete records available. They have all been carcass ultra sounded, and have complete performance records and EPD's.

This set of bulls was weaned the middle of October last year and had no creep feed. The heifers were weaned the middle of October this year and also had no creep feed.

The bulls spent the summer and fall on grass. They were raised on a high roughage diet and grown up slowly. We brought them home in November and started feeding them silage. The poorer performers were culled at that time. We like the moderate frame cattle that are easy fleshing with lots of rib shape and muscle. We want them to be able to maintain themselves on grass.

The Hereford bull is still a tremendous cross on those black cows. If you haven't used Hereford bulls on black cows yet, now is the time to start. You won't be disappointed. The heterosis and hybrid vigor will give you more pounds and better feed efficiency. The great disposition of those feed lot calves and replacement heifers is definitely another positive!

Please join us for lunch on February 10, 2018. View the cattle and I hope you are as impressed as we have been. We are looking forward to seeing you! Thank you for your interest.

Hillview Farms

PRIVATE TREATY SALE

6th Annual Silent Auction and Open House

February 10, 2018

Join us for lunch at noon. Final bids close at 2PM

At the Farm, Eureka, SD

Located 7 miles South of Eureka on Hwy 47,
1.1 miles East on Hillview Road (119th St.)

Or

15 miles north of Bowdle on Hwy 47,
1.1 miles East on Hillview Road (119th St.)

SELLING

42 Coming 2-Year-Old Polled Hereford Bulls

50 Open Yearling Black Baldy Heifers

GENERAL INFORMATION

Term and Conditions: Terms of the sale are cash. All cattle are the buyer's property as soon as sold and will be taken care of for a reasonable length of time at the buyer's risk. Neither the owners nor any person connected with this sale, assume any liability, legal or otherwise.

Guarantee: Every animal is to the best of our knowledge, free from any disease or defect. All bulls are guaranteed to be breeders. If a bull proves to be a non-breeder, either a bull of comparable rank will be substituted or money refunded or credit will be given in a future sale.

Health: Health of the herd is excellent. All cattle are under a full vaccination program and poured with Dectomax. All bulls will be semen checked and Trich tested prior to February 10. Health papers will be furnished as needed.

Sale Format: The cattle will be sold by silent auction for the opening day. This allows everybody the opportunity to view all the cattle before any are purchased. The cattle will be ready for viewing by mid January and bids may be left during that time. Each bull will have a base price with bids increasing by \$250 increments. We will be offering the baldies in groups of ten where you will bid on the entire pen. As of 2 PM February 10, bids will be final. People still actively bidding at 2 PM, will take place in a bid off if necessary to finish the bidding as quickly after 2 PM as possible. Any cattle available after that time will be sold at their base price.

Discounts: We will still be offering our generous discounts on the bulls. You will receive \$100 off each bull you haul home yourself. In addition, we have volume discounts. If you purchase 2 bulls, you receive \$50 off each bull. If you purchase 3 or more bulls, you receive \$100 off each bull. To receive these discounts bulls must leave the premises within 10 days.

Check out videos of bulls at www.hillviewherefords.com

TRAIT DEFINITIONS

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 17 traits and calculates three profit (\$) indexes.

CALVING EASE DIRECT (CE) – CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average if comparably mated, sire A's calves would be born with an 8% more likely chance of being unassisted when compared to sire B's calves.

BIRTH WEIGHT (BW) – BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

WEANING WEIGHT (WW) – WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

YEARLING WEIGHT (YW) – YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

MATERNAL MILK (MM) – The milking ability of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

MATERNAL MILK & GROWTH (M&G) – Maternal Milk & Growth reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of daughters' progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

MATERNAL CALVING EASE (MCE) – MCE EPD predicts how easily a sire's daughters will calve at 2 years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

MATURE COW WEIGHT (MCW) – The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. An example of how the MCW EPD allows breeders to compare sires: If sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if mated to similar cows, to be 15 lb. heavier at mature size.

UDDER SUSPENSION (UDDR) – Scores range from 9 (very tight) to 1 (very pendulous) and represent assessments of udder support. Weak udder suspension results in pendulous udders that make it difficult for a calf to nurse. Weak suspension in the udder indicates a lack of support in the ligament that ties the udder to the cow's body wall. Over time, weakness in this ligament will allow the udder to hang down too far from the body and may subject the udder to serious problems and increased potential for injury. UDDR EPDs are reported on the scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

TEAT SIZE (TEAT) – Scores range from 9 (very small) to 1 (very large, balloon shaped) and are subjective assessments of the teat length and circumference. Oversized teats are difficult for newborn calves to nurse, and the calf may not receive adequate colostrum. This could lead to a higher incidence of scours or decreased immunity levels in the newborn calf. TEAT EPDs are reported on the scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

SCROTAL CIRCUMFERENCE (SC) – Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a .7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm. In the Hereford genetic analysis, a multiple-trait model was used for scrotal circumference. Weaning weight was used as a predictor variable to increase the prediction accuracy of SC EPDs. Therefore, an animal with a weaning weight EPD should also have a SC EPD.

SUSTAINED COW FERTILITY (SCF) – The AHA’s new Sustained Cow Fertility EPD (SCF) is a prediction of a cow’s ability to continue to calve from three years of age through twelve years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the ten-possible calving’s to twelve years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age twelve than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

DRY MATTER INTAKE (DMI) – The Dry Matter Intake EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B’s progeny, if comparably mated, to consume on average 1 pound of feed less per day.

CARCASS WEIGHT (CW) – Carcass weight is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

RIB FAT (FAT) – The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

RIBEYE AREA (REA) – REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

MARBLING (MARB) – MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

BALDY MATERNAL INDEX (BMIS) – The Baldy Maternal Index is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

BRAHMAN INFLUENCE INDEX (BIIS) – The Brahman Influence Index is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed towards a commodity beef market since Certified Hereford Beef does not accept Brahman influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers that use Hereford bulls on Brahman influenced cows.

CERTIFIED HEREFORD BEEF INDEX (CHBS) – The Certified Hereford Beef Index is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Rib-eye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

BLACK BALDY HEIFERS

Black Baldy Heifers
This year we have 50 Black Baldy heifers in the sale offering. These heifers are Angus/Hereford cross and were born in March and April, 2017. We intend to pen them in five groups with 10 head in each pen according to weight. You will bid on the entire pen. These heifers have excellent dispositions and were taken right out of our replacement pen.

We have many Cash Flow daughters in our herd and you will notice many have bulls in this offering. His daughters have really proven to be herd makers. He has lots of rib shape and style and passes it on to his calves. He has sired many champions nationwide. He is deceased so we are only able to use him artificially now and semen is in very limited supply. We have 2 sons sired by him this year.

Atlas was the high selling bull in Olson's 2014 sale. He is another Revolution son and follows type quite a bit with 4131. He has been used completely on heifers and is consistent with calving ease. We have one bull sired by him and he should be a calving ease sire.

Homerun has been exclusively used on heifers with great results. We have one really stout, massive bull sired by him.

STAND OUT WITH PROVEN GENETICS

THE **HEREFORD ADVANTAGE** PROGRAM

Increase added market power and brand recognition with feeder cattle sired by a Hereford bull battery ranking in the top 20% for \$SCHB.

HOW TO GET STARTED:

Visit HEREFORDFEEDERCATTLE.COM to download the form.

Complete and submit form to American Hereford Association.

Information form with EPD rankings will be returned to the producer.

PERCENTILE	\$SCHB
Top Value	50
Top 1%	36
Top 5%	32
Top 10%	30
Top 15%	29
Top 20%	28
Top 25%	27
Top 30%	26

Certified Hereford Beef Index (\$SCHB) is a terminal sire index that is built on a production system where Hereford bulls are used on British-cross cows with a focus on gain and end product merit. To qualify for the Hereford Advantage program, cattle must be sired by registered Hereford bulls with transferred ownership, and the Hereford bull battery must have a \$SCHB value ranking in the top 20%.
