Fawcett's ELMCREEKRANCH

Annual Production Sale

February 11th, 2019

1 p.m. cst • Ree Heights, South Dakota

Focus

Welcome!

To all of you who share the same passion,

Welcome to our Annual Production Sale! We certainly appreciate your time and consideration of what we have to offer.

We have continued to add to our bull battery and as a result we offer the first crop of bulls from 628 and Endure. The quality these two herd bulls have brought to the table has exceeded our expectations with powerful, long bodied cattle.

Continued reports of high selling load lots at local sale barns sired by FECR bulls have kept coming in and we love to hear of your success. It is without a doubt that a consistent set of feeder cattle that are long bodied, rugged and have the genetic package to perform will get you to the top of the market wherever you are from and that is exactly what we work to offer in our bulls.

Extensive artificial insemination and embryo transplant helps us to maximize our best producers and the elite herd bulls in our lineup. Our yearling bulls represent the group of cows calving up until late March and the 2-year-old bulls represent the group of cows calving from the end of March - May.

This year we have been blessed with the arrival of Falon (Weston and Kris) and she has attracted a lot of attention. She has been a highlight of the year for sure.

As for all of you it has been a busy year. Late winter/spring storms, rain, the lack of rain and everything else that makes what we do not only the toughest job there is but also the most rewarding. We are here to help you reap the benefits of having the most reliable and stress free bulls and genetics.

With most sincerity thank you for your support in our operation,

Daniel Fawcett and the family of Fawcett's Elm Creek Ranch

Fawcett's ELMCREEKRANCH

Selling

Lots 1-61 & Lot X Yearling Hereford Bulls

Lots 62-68 Yearling Angus Bulls

VOLUME DISCOUNT

Bulls 3% on three head; 4% on four head; 5% on five or more

HERD HEALTH

All of the cattle selling will be ready for immediate shipment and accompanied by proper health certificates.
Fawcett's Elm Creek Ranch has a full vaccination program.

TERMS & CONDITIONS

This will be a video auction. All animals will be penned outside. All animals will sell to the highest bidder with the auctioneer settling any disputes as to bids. Announced changes in catalog information will take precedence over any printed material in catalog. The animals become the property of the highest bidder as soon as sold and will be cared for, for a reasonable time, at buyer's risk.

BREEDING GUARANTEE

All bulls will be guaranteed through the first 60 day breeding season. In the event, an animal fails to breed, a suitable replacement will be made or credit will be given in the next sale. The bred heifers are safe in calf and thus will be considered a breeder at the time of sale, no further guarantee will apply.

PEDIGREE

All registered animals in the sale are clean of any genetic defect to the best of our knowledge. All potential genetic defect carriers have been DNA'd and will have a profile on file with the AHA. The registered bred heifers have been DNA'd and will be pro- filed for ET permits.

LIABILITY

All persons attending the sale and related functions do so at their own risk. Fawcett's Elm Creek Ranch, the sale management and staff assume no liability, legal or otherwise, for any accidents or injuries that may occur.

EPDs were current as of January 2nd, as reported by the American Hereford Association.

RETAINED OWNERSHIPS

We will retain a percentage of several of the bulls and the registered heifers. Terms will be announced sale day.

ABSENTEE BIDS

Any person unable to attend can place a bid through Keith or Daniel or any of the listed sale representatives. Please have credit references available.

DELIVERY

Free delivery on bulls to any one location within a 300 mile radius if delivered by Fawcett's Elm Creek Ranch. We will cooperate on deliveries outside that area. Day of sale receive \$50 credit on any bull hauled that day.

INSURANCE

Handle Marketing will be available sale day to handle insurance needs. Art Handle 605-391-8233.

If planning to utilize online bidding, please contact Dan or any sale staff prior to the sale in case there happens to be a problem with the internet during the auction.

- Full brother is a member of Denver pen
- Big heavy weaning weight

Yearling commercial and registered Hereford heifers are for sale privately. Let us know if you are looking for a few registered replacements or even a load of commercials as we have them both.

We have been offering our bred heifers for sale privately in the fall. If you have interest in these females and would like to be contacted next fall let us know.

Endure

When I came across Endure out at NJW I knew he was the polled bull I had been looking for to take the polled side of things to the next level here at the ranch. He was the heaviest bull in the offering but not the largest framed. He was wide bodied and a foot longer than his contemporaries. He is backed by a tremendous cow family that is sought after by Hereford breeders across the globe. We have sold semen to Australia, Canada and South America. His calves are generally dark red and have ample amount of power. We can't wait to get his daughters into production.

The Rancher's Kind

2029

2029 has been consistent sire of high quality cattle here at the ranch. They are generally short marked, red necked and docile. 2029 daughters offer exceptional mothering ability and are the ones you really appreciate when it's a cold night during calving season. They have great teat size and udder. He offers a high calving ease direct, big scrotal and great carcass numbers. In his pedigree you will find some of the greats from Holden including 8203 who was one of the all time most powerful bulls to come out of Montana and 2029 is a direct daughter of 5139 who was an all time great producer and money generator for Holden.

- Balanced EPD's and added eye appeal

Undisputed

We have used Undisputed across the board on heifers, cows, horned and polled. He consistently produces cattle that are short marked with extra pigment. His daughters have incredible teat and udder quality that are built for the long haul. His sons will sire cattle with pigment and short marked baldies.

- Combination of the 1338 cow and Bob injected here
- Lightly tested 6188 and he has proven performance on his first calf crop with combined WW ratio of 104

Bravo

Bravo has consistently sired cattle that are moderate framed and have a ton of mass and power. They are cattle with an abundance of rib shape and the daughters in production now are middle framed and easy fleshing. We kept a son of his, 6305, who is out of one of our Dam's of Distinction to start taking over his role. We have great expectations for 6305 in the future being backed by one of the best females here on the ranch.

2109

2109 has been an anchor here at the ranch for some time. His influence floods our herd. He is very predictable in the type of cattle he produces. They will have BW's lighter than average and they will have growth that exceeds their contemporaries.

- HERD BULL
- Full sib to past Reserve Champion Pen in Denver, but could be better
- Middle framed, well balanced and really powerful

JRR Miss Tobey 711T • Dam of Lot 56

2015 Reserve Champion Pen of Three, NWSS • Full sibs to Lot 56

Yearling Hereford Bulls

Sleep On

Sleep On is exactly what his name suggests. He is the ultimate calving ease bull. If its cold you better be on top of them when calving and not sleeping on because they will come squirting out in a hurry. Sleep On offspring are moderately framed cattle that are easy fleshing and have plenty of muscle and width as they mature.

2-year-old Hereford Bulls

The 2-year-old Hereford Bulls

We are excited about this years group of two-year-old bulls. This group of bulls predominately come from the second group of cows calving from mid March through May. In this group of cows you will find calves sired by AI sires and the bulls resulting from embryo transplant. This group of bulls leave the yards as soon as the grass has greened in the spring and are on their own until fall without supplement, and then are fed a high roughage ration out on pasture where they have room to travel. They are sound, hard in their condition and ready to work and last.

The F1 Baldies

Selling on the sale are 80 F1 black baldy open yearling heifers. These heifers are the top cut and we feel they will be some of the elite to be offered anywhere in the country.

Heifers will be sold in lots of 10. High bidder has the right to take them all so don't wait to bid.

Yearling commercial and registered Hereford heifers are for sale privately. Let us know if you are looking for a few registered replacements or even a load of commercials as we have them both.

Notes

Stand out with Proven Genetics

THE HEREFORD ADVANTAGE PROGRAM

Increase added market power and brand recognition with feeder cattle sired by a Hereford bull battery ranking in the top 50% for CHB\$ index.

PROGRAM BENEFITS:

- ✓ EPD ranking summary
- ✓ Added market exposure
- ✓ Genetic improvement tool
- ✓ Access to AHA resources
- ✓ Get started at HerefordFeederCattle.com

“The Hereford Advantage program helps us to focus on providing the best quality genetics that we can possibly provide to our customers - the cattle feeder. We try to select bulls who will sire calves that will excel in the feed yard.”

-NANCY BOWLING
BOWLING RANCH, NEWKIRK, OKLA.

Certified Hereford Beef Index(CHB\$) is a terminal sire index that is built on a production system where Hereford bulls are used on Angus-based cows with a focus on feedlot performance and end-product merit. To qualify for the Hereford Advantage program, cattle must be sired by registered Hereford bulls with transferred ownership, and the Hereford bull battery must have a CHB\$ value ranking in the top 50%.

Understanding Hereford EPDs

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 15 traits and calculates four profit (\$) indexes. Research is ongoing to develop traits for fertility, feed intake and docility.

Today, DNA-marker tests can be used to enhance the accuracy of Hereford EPDs. AHA blends marker information with phenotypic information and pedigree to produce a GE-EPD. Look for the GE-EPD logo denoting an animal has been tested.

The current suite of Hereford EPDs and \$ indexes includes:

Birth Weight (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

Weaning Weight (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

Yearling Weight (YW)

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

Maternal Milk (MM)

The milking ability of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Milk & Growth (M&G)

Maternal Milk & Growth reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of daughters' progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

Maternal Calving Ease (MCE)

MCE EPD predicts how easily a sire's daughters will calve at 2 years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Maternal Calving Ease (MCE)

MCE EPD predicts how easily a sire's daughters will calve at 2 years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Mature Cow Weight (MCW)

The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. An example of how the MCW EPD allows breeders to compare sires: If sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if mated to similar cows, to be 15 lb. heavier at mature size.

Udder Suspension (UDDR)

Scores range from 9 (very tight) to 1 (very pendulous) and represent assessments of udder support. Weak udder suspension results in pendulous udders that make it difficult for a calf to nurse. Weak suspension in the udder indicates a lack of support in the ligament that ties the udder to the cow's body wall. Over time, weakness in this ligament will allow the udder to hang down too far from the body and may subject the udder to serious problems and increased potential for injury.

UDDR EPDs are reported on the scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

Teat Size (TEAT)

Scores range from 9 (very small) to 1 (very large, balloon shaped) and are subjective assessments of the teat length and circumference. Oversized teats are difficult for newborn calves to nurse, and the calf may not receive adequate colostrum. This could lead to a higher incidence of scours or decreased immunity levels in the newborn calf.

TEAT EPDs are reported on the scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

Scrotal Circumference (SC)

Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a .7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm. In the Hereford genetic analysis, a multiple-trait model was used for scrotal circumference. Weaning weight was used as a predictor variable to increase the prediction accuracy of SC EPDs. Therefore, an animal with a weaning weight EPD should also have a SC EPD."

Sustained Cow Fertility (SCF)

The AHA's new Sustained Cow Fertility EPD (SCF) is a prediction of a cow's ability to continue to calve from three years of age through twelve years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the ten-possible calving's to twelve years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age twelve than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

Dry Matter Intake

The Dry Matter Intake EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B's progeny, if comparably mated, to consume on average 1 pound of feed less per day.

Carcass Weight (CW)

Carcass weight is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

Rib Fat (FAT)

The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-musclered and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Baldy Maternal Index (BMI\$)

The Baldy Maternal Index is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

Brahman Influence Index (BI\$)

The Brahman Influence Index is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed towards a commodity beef market since Certified Hereford Beef does not accept Brahman influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers that use Hereford bulls on Brahman influenced cows.

Certified Hereford Beef Index (CHB\$)

The Certified Hereford Beef Index is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Rib-eye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.
