

STROH HEREFORD

Welcomes You

Stroh Herefords would like to invite you to our 23rd annual production sale. A lot has happened in 23 years. Friends were made, dear friends pass on and babies grow up to be teens and young adults and begin families of their own. Time marches on, change is necessary and this year is a change for our annual production sale.

We have decided to have our annual production sale at the ranch this year. We are looking forward to having you as our guest at the Ranch located five miles west of Dunn Center or one and a half miles east of the new Killdeer Roundabout at the intersection of highways 22 and 200. If you have time before the sale stop in and look at the bulls and Hereford heifers. The F1 Baldies are located out at Dave's place.

We also decided to try a video sale this year. We know this will be something different for the cattlemen and women in our area. We have been working with Marc Hotchkiss and his staff from Hereford America on this endeavor. We want to hear from you after the sale, in regard to your thoughts on the video sale, because as our customers we value your thoughts and opinions.

Our focus is on producing solid, sound, pasture ready bulls, ready to go to work for you at turn out time. We never have shown professionally, and what you see is what you get from our cattle. Over the years we have strived to improve specific traits in our herd which will, in the end, produce good uddered, milking cows which are capable of raising a top end calf at weaning time.

This year's offering is a uniform set of two-year old bulls that are sound on their feet. These bulls are thick muscled and deep bodied. Over the years we have been paying special attention to the marbling and rib eye EPD's in the sires we are purchasing for our herd, and we feel that this year's set of two-year old bulls are showing the focus we have put into this. These bulls are cake broke and range ready.

The market toppers once again this year are the white—faced black combinations. These calves are consistently topping the markets in the area; we strongly encourage you to try a Hereford Bull on your black cows. The end result of this combination is more money in your pocket on sales day. With the economic times we are facing here in southwest North Dakota, extra money is a welcome thing.

We invite you to have lunch with us at the ranch on sale day. If you have any questions, concerns or comments please let us know. We appreciate your continued input and support, without it we would not have been in the business for the past 62 years.

Best Regards,

Mike, Dawn, Lucas and Matthew Stroh

701-764-5217

TERMS & CONDITIONS

All cattle will be sold to the highest bidder without reserve. The terms of the sale will be cash. The auctioneer will settle any dispute as to bids.

Each animal will become the property of the buyer as soon as sold. Cattle will be cared for a reasonable length of time after the sale, at the buyer's risk.

All bulls of breeding age are guaranteed breeders. If an animal fails to breed after a trial of six months, it may be returned to the seller at buyer's expense. The seller reserves the right to try said animal for six months and if it proves a breeder to return it to the station of buyer at seller's expense. If the animal proves to be a non-breeder, the purchase price will be refunded or an equal animal substituted. Request for adjustment must be made within six months from time of purchase.

Extreme care has been taken in copying each pedigree to avoid errors. We are not to be held responsible for any error which might appear and which is beyond our control in the printing of the catalog.

Everyone attending this sale does so at his own responsibility and risk, and without liability on the part of the owner or his employees.

Stroh Hereford Ranch

**We will cooperate with delivery arrangements
or take \$50⁰⁰ (per bull) off
if picked up on sale day (Bulls Only)**

**Purchases of \$3000 - or more (FREE DELIVERY)
*No Free Delivery on Heifers**

PROJECT PROVES PROFITABILITY OF HEREFORD ANGUS CROSS

Birth Weight (BW)

Birth weight is an indicator of calving ease. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD. To learn more about how to use accuracy when evaluating EPDs please refer to the section "Accuracy and Confidence Range".

Weaning Weight (WW)

WW EPD reflects pre-weaning growth.

Yearling Weight (YW)

YW EPD reflects differences in the 365-day adjusted yearling weight for progeny. It is the best estimate of total growth.

Maternal Milk (MM)

The milking ability of a sire's daughters expressed in lb. of calf weaned. It predicts the difference in average weaning weight of sires' daughters' progeny due to milking ability.

Maternal Milk & Growth (MG)

Maternal Milk & Growth reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of daughters' progeny weaning weight. It is equal to one-half the sire's weaning weight EPD, plus all of his milk EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. Sometimes referred to as "total maternal" or "combined maternal."

Rib Fat (FAT)

The FAT EPD reflects differences in adjusted 365-day, twelfth-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative, FAT EPDs are expected to produce leaner progeny than sires with higher EPDs.

Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measures based on carcass measurements of harvested cattle. Sires with relatively higher REA EP are expected to produce better muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs.

Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of intramuscular fat and therefore higher quality grades. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Baldy Maternal Index (BMI\$)

A maternally focused index that has a production system based on 1,000 Hereford x Angus females with a progeny harvest end-point directed toward CHB. This index is more critical of CE than the BII\$ and also has significant weight on fertility. There is positive weight on WW and a slightly negative weight on YW

which promotes early growth and then a slow down on growth to keep mature size manageable. The emphasis of IMF is greater than the emphasis of REA. This is true because of the price difference of the choice-select spread and the fact that there is very little incentive to produce cattle better than a yield grade 3. The question comes up concerning the fact that the CHB program has been successful because of the acceptance of Select grade cattle. In answer to this, we are using a cross-breeding production system that could sell cattle on several grids and the CHB program is installing a choice product. This index is geared to service any commercial program that runs British cross cows.

Calving Easy Index (CEZ\$)

A general purpose index that focuses on identifying bulls that can be used on heifers and then ultimately the calves will be marketed through CHB. As you might expect, CE and MCE carries significant weight in this index along with fertility. There is very little weight put on growth traits and less emphasis on carcass. Remember, this is a general index that is specifically designed to be used in a heifer program.

Certified Hereford Beef Index (CHB\$)

A terminal sire index that is built on a production system where Hereford bulls sire calves for the CHB market. There is some pressure put on CE and then positive weight on both WW and YW. Remember that all offspring in this index are harvested, so they need to be born alive and then grow fast at all stages of life. Of course, we have much more emphasis on fat in this index, as we want the cattle to stay lean. There is also a significant weight on both REA and IMF with more emphasis again on IMF. This index would be used by producers who have a target of producing bulls for a terminal breeding program. This index could be used heavily in the Midwest where bulls are used in rotational breeding programs to produce cattle in a retained ownership program or simply sold to backgrounders. This is the only index that has no emphasis on fertility. Remember that nothing is retained in the herd.

* Last year's cost difference in North Dakota between a 2 year bull and a yearling bull was \$509.00. \$509.00 will breed 10 to 15 more cows for you during breeding season.

THANK YOU
FOR ATTENDING OUR SALE

We regret to say we no longer use this bull as we lost him. He has done us a lot of good in our herd. He sired several bulls in this offering, that have a lot of great traits with great numbers as you will see when you study this catalog. This bull was listed in the top 200 sires of the hereford breed.

This will be the first year we are offering bulls by this bull. We are very pleased with his progeny. He's throwing great quality cattle for us. The bulls have a lot of thickness with smooth muscling and great eye appeal. The females are very feminine, we will calve out his first heifers this coming spring. We are very excited to see how they do.

The Hereford Indexes are:

Baldy Maternal Index (BMI\$)

An index to maximize profit for commercial cow-calf producers who use Hereford bulls in rotational crossbreeding programs on Angus-based cows and heifers. Retained ownership of calves through the feedlot phase of production is assumed, with fed cattle marketed on a Certified Hereford Beef (CHB) LLC pricing grid.

Certified Hereford Beef Index (CHB\$)

A terminal sire index, where Hereford bulls are mated to British-cross cows and all offspring are sold as fed cattle on a CHB LLC pricing grid.

Calving EZ Index (CEZ\$)

This index is similar to BMI\$, except that Hereford bulls are mated only to yearling heifers. This index has increased emphasis on direct and maternal calving ease compared with the other indexes.

The index values for each animal result from multiplying each of the animals EPDs by the relative economic value of a one-unit increase in that trait under each scenario. The economic weightings were developed by Michael MacNeil, research geneticist with the USDA Agricultural Research Service in Miles City, Montana.
