

# STROH HEREFORD

## *Welcomes You*

Stroh Herefords would like to welcome you to our 24th Annual Production Sale. It is an exhilarating time to be in the cattle business. Calf prices are at an exciting level, and bred heifer prices are phenomenal. The outlook for moisture is favorable and things are looking promising in the beef industry.

We would like to invite you to stop in at the ranch and look at this year's offering of coming 2 year old bulls and heifers. This year marks our 63rd year of raising Registered Hereford Cattle. The bulls are cake broke and range ready. Overall this year's set of bulls are thick built, well-muscled and solid with good hair and plenty of pigment and eye appeal. We feel that we have a uniform set of bulls which are sound on their feet and ready to go to work for you at turn out time.

Behind every sales bull is a good cow. Here at Stroh Herefords our cows are expected to forage for themselves for 6 to seven months out of the year depending on the weather conditions. Over the past several years we have focused on producing cows with tight udders and good milk production.

Once again we strongly encourage Angus influenced herds to consider using a Hereford Bull on their cows. Baldies calves are in demand. It seems as though this cross consistently tops the markets in our area.

We would like to thank our past buyers. We would also like to thank you for your input. We value you as our customer and we listen to your comments and suggestions. We know that without you and your support we would not be in this business today.

This year's sale will be at the Ranch which is located 1.5 miles east of the Killdeer Round About or 5 miles west of Dunn Center. Please stop in on sale day and have lunch with us. Should you have any concerns, questions or comments please do not hesitate to contact us. We look forward to seeing you.

Best Regards,

Mike, Dawn, Lucas and Matthew Stroh  
1010 Hwy 22 South

### **TERMS & CONDITIONS**

All cattle will be sold to the highest bidder without reserve. The terms of the sale will be cash. The auctioneer will settle any dispute as to bids.

Each animal will become the property of the buyer as soon as sold. Cattle will be cared for a reasonable length of time after the sale, at the buyer's risk.

All bulls of breeding age are guaranteed breeders. If an animal fails to breed after a trial of six months, it may be returned to the seller at buyer's expense. The seller reserves the right to try said animal for six months and if it proves a breeder to return it to the station of buyer at seller's expense. If the animal proves to be a non-breeder it will be replaced with an animal of equal quality or credit will be given for next years sale.

Extreme care has been taken in copying each pedigree to avoid errors. We are not to be held responsible for any error which might appear and which is beyond our control in the printing of the catalog.

Everyone attending this sale does so at his own responsibility and risk, and without liability on the part of the owner or his employees.

*Stroh Hereford Ranch*

# PROJECT PROVES PROFITABILITY OF HEREFORD ANGUS CROSS

## **Birth Weight (BW)**

Birth weight is an indicator of calving ease. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD. To learn more about how to use accuracy when evaluating EPDs please refer to the section "Accuracy and Confidence Range".

## **Weaning Weight (WW)**

WW EPD reflects pre-weaning growth.

## **Yearling Weight (YW)**

YW EPD reflects differences in the 365-day adjusted yearling weight for progeny. It is the best estimate of total growth.

## **Maternal Milk (MM)**

The milking ability of a sire's daughters expressed in lb. of calf weaned. It predicts the difference in average weaning weight of sires' daughters' progeny due to milking ability.

## **Maternal Milk & Growth (MG)**

Maternal Milk & Growth reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of daughters' progeny weaning weight. It is equal to one-half the sire's weaning weight EPD, plus all of his milk EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. Sometimes referred to as "total maternal" or "combined maternal."

## **Rib Fat (FAT)**

The FAT EPD reflects differences in adjusted 365-day, twelfth-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative, FAT EPDs are expected to produce leaner progeny than sires with higher EPDs.

Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

## **Ribeye Area (REA)**

REA EPDs reflect differences in an adjusted 365-day ribeye area measures based on carcass measurements of harvested cattle. Sires with relatively higher REA EP are expected to produce better muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

## **Marbling (MARB)**

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of intramuscular fat and therefore higher quality grades. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

## **Baldy Maternal Index (BMI\$)**

A maternally focused index that has a production system based on 1,000 Hereford x Angus females with a progeny harvest endpoint directed toward CHB. This index is more critical of CE than

the BII\$ and also has significant weight on fertility. There is positive weight on WW and a slightly negative weight on YW which promotes early growth and then a slow down on growth to keep mature size manageable. The emphasis of IMF is greater than the emphasis of REA. This is true because of the price difference of the choice-select spread and the fact that there is very little incentive to produce cattle better than a yield grade 3. The question comes up concerning the fact that the CHB program has been successful because of the acceptance of Select grade cattle. In answer to this, we are using a cross-breeding production system that could sell cattle on several grids and the CHB program is installing a choice product. This index is geared to service any commercial program that runs British cross cows.

### **Calving Easy Index (CEZ\$)**

A general purpose index that focuses on identifying bulls that can be used on heifers and then ultimately the calves will be marketed through CHB. As you might expect, CE and MCE carries significant weight in this index along with fertility. There is very little weight put on growth traits and less emphasis on carcass. Remember, this is a general index that is specifically designed to be used in a heifer program.

### **Certified Hereford Beef Index (CHB\$)**

A terminal sire index that is built on a production system where Hereford bulls sire calves for the CHB market. There is some pressure put on CE and then positive weight on both WW and YW. Remember that all offspring in this index are harvested, so they need to be born alive and then grow fast at all stages of life. Of course, we have much more emphasis on fat in this index, as we want the cattle to stay lean. There is also a significant weight on both REA and IMF with more emphasis again on IMF. This index would be used by producers who have a target of producing bulls for a terminal breeding program. This index could be used heavily in the Midwest where bulls are used in rotational breeding programs to produce cattle in a retained ownership program or simply sold to backgrounders. This is the only index that has no emphasis on fertility. Remember that nothing is retained in the herd.

## **THE CERTIFIED HEREFORD BEEF SIRE OF DISTINCTION**

According to the American Hereford Association. The Certified Hereford Beef Sire of Distinction (CHBS) program recognizes Hereford Bulls that have excelled in carcass traits. The Board initiated this program in August 2007.

To qualify as a CHBS, a bull must:

- Be in the top 25% for the CHB\$ profit index
- Have a minimum accuracy level for both ribeye area (REA) and marbling (MARB) expected progeny difference (EPD)

The CHBS distinction is used to recognize sires in the Hereford breed that excelled in improving carcass traits. Although all bulls have the opportunity, only a few bulls will be recognized. A bull receiving the CHBS status will be recognized with CHB after his name when doing an animal or EPD injury on *Hereford.org*

Scrotal	FAT	REA	Marb	BMI	CEZ	CHB
.8	.002	.28	.05	17	15	21

The Hereford Indexes are:

### ***Baldy Maternal Index (BMI\$)***

An index to maximize profit for commercial cow-calf producers who use Hereford bulls in rotational crossbreeding programs on Angus-based cows and heifers. Retained ownership of calves through the feedlot phase of production is assumed, with fed cattle marketed on a Certified Hereford Beef (CHB) LLC pricing grid.

### ***Certified Hereford Beef Index (CHB\$)***

A terminal sire index, where Hereford bulls are mated to British-cross cows and all offspring are sold as fed cattle on a CHB LLC pricing grid.

### ***Calving EZ Index (CEZ\$)***

This index is similar to BMI\$, except that Hereford bulls are mated only to yearling heifers. This index has increased emphasis on direct and maternal calving ease compared with the other indexes.

The index values for each animal result from multiplying each of the animals EPDs by the relative economic value of a one-unit increase in that trait under each scenario. The economic weightings were developed by Michael MacNeil, research geneticist with the USDA Agricultural Research Service in Miles City, Montana.

\* We call him Shorty. If you want a combination of short and stout, well, you got it! He is a short and stout. This bull is extremely thick and square in the hind end. He has a lot of curvature of rib and he works his way into a smooth shoulder. He will build herds of cows and produce sale topping steers that the packing plants are looking for. This bull has a gentle disposition, not to mention he is in the top 50% of the breed for twelve traits. I would venture to say this bull will produce foundation females and superb steers.
