

STROH HEREFORD *Welcomes You*

Stroh Herefords cordially invites you to attend our 25th annual production sale! It is truly an amazing time to be in the cattle industry. We have had two years of above normal precipitation, grain crops and hay crops have been above average, and cattle prices are at an all-time high.

Our 25th Annual production sale has Matthew making his debut with two bulls in the sale. Many things have changed in the Hereford industry over the past 25 years. In producing this year's catalog, we enjoyed looking at photographs from past sales (including those from the 1970's) and have tried to include a few of them in our catalog.

This year's set of bulls are bred to have quality and soundness. As always, we have put forth an effort to provide you with Hereford bulls that have a gentle disposition. Our bulls are range raised and ready to work for you. We do not over-feed our bulls, and what you see is what you get. The bulls with the SHR prefix were not creep fed as calves. The bulls with the SH prefix did receive creep feed as calves.

We value our customers, and listen to their input. As a result we have several bulls in this year's offering which would work on heifers. We have also been working to improve our weaning weights, milk, milk and growth and carcass traits. Are we where we want to be, no not yet, but we continue to purchase herd sires who's strong points are the above mentioned traits.

As always we strongly encourage you to consider using a Hereford bull in your cross breeding program. Once again this year the Hereford/Angus cross calves have been topping the local markets bringing top dollar. Using a Hereford bull in your cross breeding program gives you heterosis (high bred vigor) and increased weaning weights which means more dollars at selling time.

It is an exciting time to be in the Hereford business. Over the years we have seen the demand for Hereford cattle steadily increase. The demand for Certified Hereford Beef is on the rise as well.

We encourage you to stop by the ranch and look at the cattle. If you have any questions in regards to this year's offering do not hesitate to contact us. We look forward to seeing you on sale day! Lunch is at noon and the sale starts at 1:00 mountain time.

Best Regards,

Mike, Dawn, Lucas and Matthew Stroh

Tony & Leona Stroh
10550 Hwy 200
Killdeer, North Dakota 58640
701-764-5217

TERMS & CONDITIONS: All cattle will be sold to the highest bidder without reserve. The terms of the sale will be cash. The auctioneer will settle any dispute as to bids.

Each animal will become the property of the buyer as soon as sold. Cattle will be cared for a reasonable length of time after the sale, at the buyer's risk. Announced changes in catalog information sale day, take precedence over printed material in this catalog. Everyone attending this sale does so at his own responsibility and risk, and without liability on the part of the owner or his employees.

GUARANTEE: All bulls of breeding age are guaranteed breeders. If an animal fails to breed after a trial of six months, it may be returned to the seller at buyer's expense. The seller reserves the right to try said animal for six months and if it proves a breeder to return it to the station of buyer at seller's expense. If the animal proves to be a non-breeder it will be replaced with an animal of equal quality or credit will be given for next years sale.

We assume no liability legal or otherwise to make any further compensation to the buyer no other warranty of any nature is expressed or implied

Extreme care has been taken in copying each pedigree to avoid errors. We are not to be held responsible for any error which might appear and which is beyond our control in the printing of the catalog.

DELIVERY: Deliveries will be made on purchase of \$3500 or more to central points up to 400 miles. We will cooperate with buyers on delivery of all cattle regardless of number or distance. No delivery provided for heifers

HEALTH: We have been privileged to provide veterinary services for the Stroh Ranch for the past 30 years. They are very caring people and take outstanding care of their cattle. They have a passion for raising docile cattle that perform exceptional in the pasture and the feedlot.

Their herd is on a full vaccination program. The cowherd is vaccinated pre-breeding with PregGuard Gold FP® 10. The bulls receive PregGuard Gold FP® 10, SolidBac Pinkeye IR/PR vaccine and Fusogard® footrot vaccine before turnout.

The calves receive BoviShield Gold-One Shot and UltraBac 7, and SolidBac Pinkeye IR/PR at pasture turn out. The cows are dewormed at branding with Cydectin and the calves are dewormed with LongRange. The calves receive booster vaccinations and are dewormed in the fall.

Best of luck in 2015!

Dr. Kim Brummond & Dr. Erika Schumacher

Project proves profitability of hereford angus cross

Birth Weight (BW)

Birth weight is an indicator of calving ease. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD. To learn more about how to use accuracy when evaluating EPDs please refer to the section "Accuracy and Confidence Range".

Weaning Weight (WW)

WW EPD reflects pre-weaning growth.

Yearling Weight (YW)

YW EPD reflects differences in the 365-day adjusted yearling weight for progeny. It is the best estimate of total growth.

Maternal Milk (MM)

The milking ability of a sire's daughters expressed in lb. of calf weaned. It predicts the difference in average weaning weight of sires' daughters' progeny due to milking ability.

Maternal Milk & Growth (MG)

Maternal Milk & Growth reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of daughters' progeny weaning weight. It is equal to one-half the sire's weaning weight EPD, plus all of his milk EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. Sometimes referred to as "total maternal" or "combined maternal."

Rib Fat (FAT)

The FAT EPD reflects differences in adjusted 365-day, twelfth-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative, FAT EPDs are expected to produce leaner progeny than sires with higher EPDs.

Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measures based on carcass measurements of harvested cattle. Sires with relatively higher REA EP are expected to produce better muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of intramuscular fat and therefore higher quality grades. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Baldy Maternal Index (BMI\$)

A maternally focused index that has a production system based on 1,000 Hereford x Angus females with a progeny harvest end-point directed toward CHB. This index is more critical of CE than

the BII\$ and also has significant weight on fertility. There is positive weight on WW and a slightly negative weight on YW which promotes early growth and then a slow down on growth to keep mature size manageable. The emphasis of IMF is greater than the emphasis of REA. This is true because of the price difference of the choice-select spread and the fact that there is very little incentive to produce cattle better than a yield grade 3. The question comes up concerning the fact that the CHB program has been successful because of the acceptance of Select grade cattle. In answer to this, we are using a cross-breeding production system that could sell cattle on several grids and the CHB program is installing a choice product. This index is geared to service any commercial program that runs British cross cows.

Calving Easy Index (CEZ\$)

A general purpose index that focuses on identifying bulls that can be used on heifers and then ultimately the calves will be marketed through CHB. As you might expect, CE and MCE carries significant weight in this index along with fertility. There is very little weight put on growth traits and less emphasis on carcass. Remember, this is a general index that is specifically designed to be used in a heifer program.

Certified Hereford Beef Index (CHB\$)

A terminal sire index that is built on a production system where Hereford bulls sire calves for the CHB market. There is some pressure put on CE and then positive weight on both WW and YW. Remember that all offspring in this index are harvested, so they need to be born alive and then grow fast at all stages of life. Of course, we have much more emphasis on fat in this index, as we want the cattle to stay lean. There is also a significant weight on both REA and IMF with more emphasis again on IMF. This index would be used by producers who have a target of producing bulls for a terminal breeding program. This index could be used heavily in the Midwest where bulls are used in rotational breeding programs to produce cattle in a retained ownership program or simply sold to backgrounders. This is the only index that has no emphasis on fertility. Remember that nothing is retained in the herd.

THE CERTIFIED HEREFORD BEEF SIRE OF DISTINCTION

According to the American Hereford Association. The Certified Hereford Beef Sire of Distinction (CHBS) program recognizes Hereford Bulls that have excelled in carcass traits. The Board initiated this program in August 2007.

To qualify as a CHBS, a bull must:

- Be in the top 25% for the CHB\$ profit index
- Have a minimum accuracy level for both ribeye area (REA) and marbling (MARB) expected progeny difference (EPD)

The CHBS distinction is used to recognize sires in the Hereford breed that excelled in improving carcass traits. Although all bulls have the opportunity, only a few bulls will be recognized. A bull receiving the CHBS status will be recognized with CHB after his name when doing an animal or EPD inquiry on Hereford.org

The Hereford Indexes are:

Baldy Maternal Index (BMI\$)

An index to maximize profit for commercial cow-calf producers who use Hereford bulls in rotational crossbreeding programs on Angus-based cows and heifers. Retained ownership of calves through the feedlot phase of production is assumed, with fed cattle marketed on a Certified Hereford Beef (CHB) LLC pricing grid.

Certified Hereford Beef Index (CHB\$)

A terminal sire index, where Hereford bulls are mated to British-cross cows and all offspring are sold as fed cattle on a CHB LLC pricing grid.

Calving EZ Index (CEZ\$)

This index is similar to BMI\$, except that Hereford bulls are mated only to yearling heifers. This index has increased emphasis on direct and maternal calving ease compared with the other indexes.

The index values for each animal result from multiplying each of the animals EPDs by the relative economic value of a one-unit increase in that trait under each scenario. The economic weightings were developed by Michael MacNeil, research geneticist with the USDA Agricultural Research Service in Miles City, Montana.
