

70 years of raising cattle with today's cattleman in mind

STROH HEREFORD RANCH

*31st Annual Ranch Ready
Production Sale*

THURS., FEB. 4, 2021

1:00 p.m. (MT) • At the Ranch

SHR TRUST 9151

SELLING: 48 Coming Two-Year-Old Bulls

(A two-year-old bull has more longevity and can cover more cows than a yearling bull. These bulls are cake broke and ready to go to work for you.)

10 Bred Registered Hereford Heifers

(Bred to Black Angus bulls)

15 Bred Commercial Heifers

(Bred to Black Angus bulls)

Dear Cattlemen and Women:

Stroh Hereford Ranch would like to cordially invite you to our 31st Annual Ranch Ready Production Sale on Thursday, February 4th, 2021 at 1:00PM Mountain Time. The ranch is located 1.5 miles east of the Killdeer Roundabout on Highway 200 or 5 miles west of Dunn Center. Wow what a year 2020 has been! We have seen fluctuating cattle markets, a pandemic, and dry conditions this fall/winter for many of us. This will be a year that we will tell our grandchildren and great grandchildren about.

Over the years we have seen trends come and go, but our goal has always remained the same. Our goal is to improve upon our genetics in order to provide our customers with a selection of bulls which meet the needs of today's modern ranches. This year's bulls have the same ranch ready look about them; they are long, thick, deep, and rugged. They were raised on North Dakota prairie and mommas milk till weaning day. Once the bulls settled down after weaning, we started them on a low energy high roughage diet. This low energy high roughage diet did not include any grain, this reflects why the yearling weights are so low. When we made the ultimate decision as to which bulls would be in the sale, we looked at those bulls that we were able to identify as the "easy keepers"; thus giving you, the producer an animal that will add value to your bottom line. The quality runs deep from top to bottom, and we strive to deliver a uniform set of bulls that aren't all fluff. This is because we want our customers to know what they are getting and that their expectations can be met!

In today's cattle market the baldy steer is of more value than ever. Keep in mind the following facts about using a Hereford Bull on Black Cows:

1. Black baldy calves are sought after by a number of quality beef programs.
2. Hereford genetics maximize the value of your herd by adding a 7% higher pregnancy rate.
3. Using a Hereford Bull on a Black Angus cow will bring you \$51.00 more per cow per year.
4. Hereford genetics give you a \$30.00 advantage in feedlot profitability.
5. Also keep in mind that premiums are now being paid for red and black baldy females.
6. Hereford genetics can add docility to your herd.

Our vaccination program is as follows: before we turn out in the spring our calves are given BoviShield Gold-One Shot and UltraBac 7. At branding the calves are dewormed. The calves receive booster shots in the fall and are once again dewormed. Our cows are vaccinated before we turn them out for breeding with PregGuard Gold 10 in the spring. The bulls are fertility tested in the spring and they also receive PregGuard Gold 10. This year's sale bulls were poured in December.

On sale day the bulls will be sale ready, not butcher ready, or Denver Show Ring ready, or bulls that did not sell in last year's sale. They are developed on a forage diet for soundness and longevity purposes. As always to help with gentleness the bulls and the heifers are cake broke. They have sufficient pigment and are phenotypically correct. Remember that a two-year-old bull can service 30% more cows than a yearling bull can.

We want to thank our past customers for their dedication and support. We know that without you we would not be here today. We also want you to know that when we buy herd sires for our herd, we take into consideration the things we have visited with our customers about in regard to what they are looking for in a herd bull.

We would like to invite you to stop in and look at the cattle prior to sale day. Should you have any questions please do not hesitate to contact us. We look forward to seeing you!

Sincerely,

Mike, Dawn, Lucas and Matthew Stroh

COMMERCIAL PROGRAMS & RESOURCES

MARKETING PROGRAMS

HEREFORD ADVANTAGE

Use the Hereford Advantage program to increase added market power and brand recognition with feeder cattle sired by a Hereford bull battery ranking in the top 50% of the breed for the Certified Hereford Beef Profit Index (CHBS). Feeder cattle enrolled in this program, through IMI Global, must also be source and age verified, have current BQA certification and vaccination program documentation.

MATERNAL ADVANTAGE

The Maternal Advantage program generates commercial replacement females with added longevity, more docility, increased fertility and more profit per year. Participating herd bull batteries must rank in the top 50% of the breed for Baldy Maternal Profit Index (BMI\$) if used on British-based cows or the top 50% of the breed for Brahman Influence Profit Index (BII\$) if used on Brahman-based cows.

PREMIUM RED BALDY

Premium Red Baldy is designed to take advantage of the best traits of both Hereford and Red Angus breeds and provide commercial producers with premium replacement females. Females enrolled in the program must be sired by bulls in the top 50% of the breed for BMI\$ if Hereford or Profitability and Sustainability Index (ProS) if Red Angus.

RESOURCES

- Learn more about these programs at www.Hereford.org/Commercial

Bid Online!

If you are unable to attend the sale, you can register to watch or bid online through The Livestock Link by following these instructions:

- Visit our website, www.thelivestocklink.com.
- Click the "Auctions" tab.
- Click on "Click Here to Register" below "USER-LOGIN".
- Enter your e-mail address and password, and fill out all your contact information.
- Fill out your banking information. If you are only viewing the sale and do not wish to bid, this information can be left blank.
- Check the checkbox at the bottom of the page that says "I'm not a robot" to prove you are a real person.
- Click "Register" at the bottom of the page.
- You will receive an email with a link to activate your account.
- **Please register to bid at least 24 hours in advance of the sale.**

You will receive an email when you are approved for bidding. All applications will be reviewed and processed promptly. You will receive a bidder number only after you have made a purchase in the sale, and that number will only be used at that sale. When the sale is completed, please contact the sale owner or manager for instructions of payment and delivery of your purchase.

To use our service, you must have access to high speed internet.

Questions? Contact Aaron Friedt at (701) 590-9597 or support at (605) 920-9261

www.thelivestocklink.com

TERMS & CONDITIONS: All cattle will be sold to the highest bidder without reserve. The terms of the sale will be cash. The auctioneer will settle any dispute as to bids.

Each animal will become the property of the buyer as soon as sold. Cattle will be cared for a reasonable length of time after the sale, at the buyer's risk. Announced changes in catalog information sale day, take precedence over printed material in this catalog. Everyone attending this sale does so at his own responsibility and risk, and without liability on the part of the owner or his employees.

GUARANTEE: All bulls of breeding age are guaranteed breeders. If an animal fails to breed after a trial of six months, it may be returned to the seller at buyer's expense. The seller reserves the right to try said animal for six months and if it proves a breeder to return it to the station of buyer at seller's expense. If the animal proves to be a non-breeder it will be replaced with an animal of equal quality or credit will be given for next years sale.

We assume no liability legal or otherwise to make any further compensation to the buyer no other warranty of any nature is expressed or implied.

Extreme care has been taken in copying each pedigree to avoid errors. We are not to be held responsible for any error which might appear and which is beyond our control in the printing of the catalog.

DELIVERY: Deliveries will be made on purchase of \$3500 or more to central points up to 400 miles. We will cooperate with buyers on delivery of all cattle regardless of number or distance. No delivery provided for heifers.

ABSENTEE BIDDING: Anybody wishing to bid that cannot attend the sale may place a phone bid by contacting any listed sales representative, (Will Bollum, Tony Heins, Kevin Murnin and Jill Hotchkiss), Mike Stroh, Matt Stroh or Scott Weishaar.

KILLDEER ACCOMMODATIONS: Cobblestone Hotel & Suites, 701-764-2200; Mountain View Hotel, 701-764-5843.

We will cooperate with delivery arrangements or take \$50.00 (per bull) off if picked up on sale day (Bulls Only)

TRAIT DEFINITIONS

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 17 traits and calculates three profit (\$) indexes.

CALVING EASE DIRECT (CED) – CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average if comparably mated, sire A's calves would be born with an 8% more likely chance of being unassisted when compared to sire B's calves.

BIRTH WEIGHT (BW) – BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

WEANING WEIGHT (WW) – WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

YEARLING WEIGHT (YW) – YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

DRY MATTER INTAKE (DMI) – The Dry Matter Intake EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B's progeny, if comparably mated, to consume on average 1 pound of feed less per day.

SCROTAL CIRCUMFERENCE (SC) – Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a .7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm. In the Hereford genetic analysis, a multiple-trait model was used for scrotal circumference. Weaning weight was used as a predictor variable to increase the prediction accuracy of SC EPDs. Therefore, an animal with a weaning weight EPD should also have a SC EPD.

SUSTAINED COW FERTILITY (SCF) – The AHA's new Sustained Cow Fertility EPD (SCF) is a prediction of a cow's ability to continue to calve from three years of age through twelve years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the ten-possible calving's to twelve years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age twelve than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

MATERNAL MILK (Milk) – The milking ability of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

MATERNAL MILK & GROWTH (M&G) – Maternal Milk & Growth reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of daughters' progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

MATERNAL CALVING EASE (MCE) – MCE EPD predicts how easily a sire's daughters will calve at 2 years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

MATURE COW WEIGHT (MCW) – The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. An example of how the MCW EPD allows breeders to compare sires: If sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if mated to similar cows, to be 15 lb. heavier at mature size.

UDDER SUSPENSION (UDDR) – Scores range from 9 (very tight) to 1 (very pendulous) and represent assessments of udder support. Weak udder suspension results in pendulous udders that make it difficult for a calf to nurse. Weak suspension in the udder indicates a lack of support in the ligament that ties the udder to the cow's body wall. Over time, weakness in this ligament will allow the udder to hang down too far from the body and may subject the udder to serious problems and increased potential for injury. UDDR EPDs are reported on the scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

TEAT SIZE (TEAT) – Scores range from 9 (very small) to 1 (very large, balloon shaped) and are subjective assessments of the teat length and circumference. Oversized teats are

difficult for newborn calves to nurse, and the calf may not receive adequate colostrum. This could lead to a higher incidence of scours or decreased immunity levels in the newborn calf. TEAT EPDs are reported on the scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

CARCASS WEIGHT (CW) – Carcass weight is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

RIB FAT (FAT) – The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

RIBEYE AREA (REA) – REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

MARBLING (MRB) – MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, IMF) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

BALDY MATERNAL INDEX (BMI\$) – The Baldy Maternal Index is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

BRAHMAN INFLUENCE INDEX (BII\$) – The Brahman Influence Index is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed towards a commodity beef market since Certified Hereford Beef does not accept Brahman influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers that use Hereford bulls on Brahman influenced cows.

CERTIFIED HEREFORD BEEF INDEX (CHB\$) – The Certified Hereford Beef Index is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Rib-eye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

THE CHB SIRE OF DISTINCTION

The Certified Hereford Beef Sire of Distinction program recognizes Hereford bulls who excel in carcass traits. The American Hereford Association Board of Directors initiated the program in 2007 to to recognize superior carcass bulls.

Qualifications - To qualify as a Certified Hereford Beef Sire of Distinction, a bull must be in the top 25% for the CHB\$ profit index and have a minimum accuracy level of 30% for both ribeye area (REA) and marbling (MRB) expected progeny difference (EPD). The Certified Hereford Beef Sires distinction is used to recognize sires in the Hereford breed that excel in improving carcass traits. A bull receiving the CHBS status will be recognized with CHB after his name when doing an animal or EPD inquiry on Hereford.org.

Here is a large outlined, heavily muscled, deep sided Cooper bull. 3146A injects performance, muscle and maternal into a calf crop. As this comment is being written 3146A is in the top 10% of the breed for weaning, yearling, milk & growth and carcass weight. Well maintaining the rest of his maternal figures to be in the top 30% of the breed.

This calm dispositioned Cooper bull excels in the areas we believe to be beneficial to the modern beef producer. 432B stamps every calf the same while injecting a number of traits to be beneficial to a cow/calf operation. He is in the top 20% of the breed in the performance categories while maintaining a maternal advantage which is second to none being in the top 10% of the breed for milk and milk & growth. He has recently been recognized as a Certified Hereford Beef Sire of Distinction through the American Hereford Association.

We are very excited to bring this bull into our program. He brings a lot of length, width and muscling to the table! This guy is a true power house phenotypically and genotypically especially when you take a look at the maternal figures 57 on milk & growth and 27 on milk! We look forward to the impact he will have on our program in the years to come. 6194 has tested free of all genetic defects including Mandibulo-facial Dysostosis this was verified through genetic testing in conjunction with the AHA for breed improvement.

Sensation 2053 has created a lasting impact on our program. He creates females which are second to none and sons that have a definitive herd bull look. He excels in a number of categories including dry matter intake, calving ease, maternal, as well as boasting a 477 BMI Index. This is the last year sons will be available.

Here is a bull straight out of the high desert. He's long and thick with loads of eye appeal. He has a strong genetic package that we feel will complement the line-one genetics we have been incorporating over the years. The hopes are that this bull's progeny will allow us to offer an outcross without sacrificing the need for maternally oriented high performing cattle.

These 3146 progeny don't fail to impress us! This is another long spined soggy thick made 3146 son that falls into the cowboy's kind category! Dam 4042 has earned the right to be called an AHA Dam of Distinction by being a consistent mother cow that breeds and raises them effectively. She has an average ratio of 112% at weaning time! This bulls maternal grandmother also has earned this title as well!

9161 is a thick and deep Captain son that will inject a true maternal advantage into a program! This bull has all of the tools required to create feeder calves that will turn a profit!

THE BALD-FACED TRUTH

ABOUT HEREFORD GENETICS

Take advantage of hybrid vigor with Hereford genetics.

HEREFORD ADVANTAGE

Use the Hereford Advantage program to increase added market power and brand recognition with feeder cattle sired by a Hereford bull battery ranking in the top 50% for the CHB\$ index.

MATERNAL ADVANTAGE

The Maternal Advantage program generates females with added longevity, more docility, increased fertility and more profit per year. Can be utilized by producers using Hereford bulls on British-based cows or Brahman-based cows in their breeding program.

PREMIUM RED BALDY

Premium Red Baldy is designed to take advantage of the best traits of both Hereford and Red Angus. Females must be sired by bulls in the top 50% of the breed for Baldy Maternal Index (BMI\$) or Herdbuilder Index (HB).

Linebacker is a fitting name for 9162! This mixing of 432B and 50W really was something I was excited to bring to fruition, every positive trait came forward from sides, exceptional muscle, great depth, tremendous pigment and phenomenal performance figures! Imagine a whole ring full of feeder calves that look just like him! 9162 adds maternal merit qualifying for the Premium Red Baldy Program as well as the Maternal Advantage Program and adds value to a set of steer calves being a prime time candidate for the CHB program! Momma 388 is a cow I count on year in and year out to continually move my program forward she has put bulls in the sale before maternal half-brother 7166 is working for Craig Kieson.

Don't let this young calf fool you he made the sale for a reason! Whether it be his phenomenal muscle and athleticism or the ever important fact he has a tremendous momma cow to back him up!

REGISTERED AND COMMERCIAL BRED HEIFERS

This year we have a tremendous set of bred heifers to offer you! They all look to be queens of the prairie! These heifers are deep bodied, great spinal extension, phenomenal femininity, and above all the look of a momma cow.

These girls have been managed the same as the heifer groups in our previous sales. They have had low energy rations after weaning, were expected to gain on North Dakota grassland and breed up. They were bred to bulls we purchased from Schmidt Angus of Gladstone ND, and OPP Angus of Hebron ND. Bulls were kicked out July 3rd and pulled up September 1st.

All heifers have been bangs vaccinated and received a full line of animal health shots since birth. They were vaccinated with Pregarid Ten in the spring of the year before they went to grass. Heifers were ultra-sounded December 9th and determined to be safe with calf. They also received a shot of 7-way and were poured with Ivomec on ultrasound day. Heifers have been receiving free choice mineral from Prairie Nutrition Center and are being fed a high forage diet to help maximize their development. If you have any questions on these ladies call Mike at (701)-290-1191 or Matt at (701)-690-4860.

First year these Scope daughters are available, so we started with a good one! Soft sided, free moving heifer with some great cow power behind her. Mother 369 is an AHA Dam of Distinction! This female has the ability to be a front pasture momma.

This 2053 x 140X combo is a sure way to add maternal and muscle into a mother cow. She indexes well in the maternal category.

DAMS OF DISTINCTION

According to The American Hereford Association (AHA), "A cow receiving the Dam of Distinction honor is a cow that meets the highest standards of commercial cattle production. The cow must do her job, but her owner must also manage the herd correctly to give her the opportunity to excel. Only a few active cows are recognized. All heifers have the potential to be a Dam of Distinction, but only a small percentage fit the job description of an ideal cow year in and year out. Females attaining the Dam of Distinction status are recognized with "DOD" after their names on the AHA website."
