Contact Dan, Keith or any of the sale staff if you are unable to attend the sale or if you have any questions regarding the cattle.

Welcome!

Welcome to our annual sale,

The bulls that we will be selling represent two different calving intervals meaning we run two different cow herds, one at the north end of the ranch and one at the south. The north end of the ranch calve in February through March and the bulls produced from this group of cows are what make up the yearling bulls in the sale. The cows running the south end of the ranch calve the end of March through the end of May and the bulls produced by these cows are the two-year-old bulls in the sale.

The yearling bulls are weaned in October, processed and started on a mild grower ration to ensure longevity. The two-year-old bulls selling leave the yards and go to pasture as soon as the grass has greened up and stay out on a section of pasture in the hills with zero supplement throughout the summer until mid fall when we bring them in closer and begin feeding them for the sale. The strong survive when we talk about the two-year-olds as they are on their own from May until October.

We run our operation with the same expectations as any good commercial operation and that is to keep inputs to a bare minimum and demand maximum output. These cattle have to be easy fleshing, sound structured, great footed and are to be able to raise a calf that will push down the scale in the fall with a minimal labor force.

We search out the best herd bulls in the breed to ensure our customers have access to breed leading genetics. Horned or polled, if you are seeking to raise feeder cattle that demand a premium, bulls to raise top replacements, genetics to increase the value of your purebred operation or to simply add longevity and profit margins then FECR is your source for the rancher's kind.

If you are unable to be here in person to view the bulls please call any of us to discuss them and we will help you get what you are after.

From all of us here at Fawcett's Elm Creek Ranch thank you for your consideration.

Fawcett's Elm Creek Ranch

GE EPD's will be available soon on yearling bulls

SELLING

Lots 1-53 Yearling Hereford & Angus Bulls
Lots 54-98 2-Year-Old Hereford & Angus Bulls
Lots 99-105 Open F1 Baldy Replacement Females
(sell as groups of 10)

The Yearling Hereford Bulls

The yearling bulls come predominately from the group of cows calving late January through mid March. These bulls have been on a high roughage ration at a low MCAL to ensure longevity. We want our bulls to be able to work hard and last years without any problems. You will find many 1/2 and 3/4 brothers in this offering to help you to have a consistent calf crop. Most all of the bulls in this group are the result of Artificial Insemination. Carcass data will be available on sale day. If there are any questions on pedigrees or any other information you are interested in please ask.

The 2-year-old Hereford Bulls

We are excited about this years group of two-year-old bulls. This group of bulls predominately come from the second group of cows calving from mid March through May. In this group of cows you will find calves sired by AI sires and the bulls resulting from embryo transplant. This group of bulls leave the yards as soon as the grass has greened in the spring and are on their own until fall without supplement where the strong survive, and then are fed a high roughage ration out on pasture where they have room to travel. They are sound, hard in their condition and ready to work and last.

INTERNET BIDDING

Livestock Link • www.thelivestocklink.com
Absentee bidders who wish to utilize the internet may bid online at www.thelivestocklink.com

ACCOMMODATIONS

Super 8 • Miller, SD • 605-853-2721

VOLUME DISCOUNT

Bulls 3% on three head; 4% on four head; 5% on five or more

HERD HEALTH

All of the cattle selling will be ready for immediate shipment and accompanied by proper health certificates.
Fawcett's Elm Creek Ranch has a full vaccination program.

TERMS & CONDITIONS

This will be a video auction. All animals will be penned outside. All animals will sell to the highest bidder with the auctioneer settling any disputes as to bids. Announced changes in catalog information will take precedence over any printed material in catalog. The animals become the property of the highest bidder as soon as sold and will be cared for, for a reasonable time, at buyer's risk.

BREEDING GUARANTEE

All bulls will be guaranteed through the first 60 day breeding season. In the event, an animal fails to breed, a suitable replacement will be made or credit will be given in the next sale.

PEDIGREE

All registered animals in the sale are clean of any genetic defects to the best of our knowledge. All potential genetic defect carriers have been DNA'd and will have a profile on file with the AHA. The registered bred heifers have been DNA'd and will be pro-filed for ET permits.

LIABILITY

All persons attending the sale and related functions do so at their own risk. Fawcett's Elm Creek Ranch, the sale management and staff assume no liability, legal or otherwise, for any accidents or injuries that may occur.

RETAINED OWNERSHIPS

We will retain a percentage of several of the bulls and the registered heifers. Terms will be announced sale day.

ABSENTEE BIDS

Any person unable to attend can place a bid through Keith or Daniel or any of the listed sale representatives. Please have credit references available.

DELIVERY

Free delivery on bulls to central location within bordering states if delivered by Fawcett's Elm Creek Ranch. We will cooperate on deliveries outside that area. Day of sale receive \$50 credit on any bull hauled that day.

INSURANCE

Handle Marketing will be available sale day to handle insurance needs. Art Handle 605-391-8233.

ELMCREEKRANCH

Ree Heights, South Dakota

Welcome Troy Williamson!

We would like to introduce Troy Williamson to all of you. He started helping us about a year ago. He has been a family friend for decades and has been helping us in Denver since the beginning. Troy is no stranger to the Hereford breed as his operation is known as Springwater Polled Herefords and he brought a group of real good momma cows to the ranch. You will see his prefix "SPH" throughout the catalog. The cows that he brought to the ranch are as good as any and offer a bit different genetic base. We are thankful to have him here at the ranch and consider him part of our family. If you have any questions on this year's offering, feel free to give Troy a call.

Angus Breed Averages

CED	BW	WW	YW	Milk	\$W	\$F
6.0	1.2	58	103	25	59	86
\$G	\$B	Marb	REA	Fat		
44	131	0.53	0.55	0.12		

EPD's are to be utilized as a tool in your selection process to better understand what to expect in certain aspects from your bull. Below you will find a quick explanation to help you better understand what you will find in this catalog.

LE PIG and RE PIG represent the percentage of pigment on each eye.

When referring to ratios throughout the catalog: 110% weaning weight ratio means this bull weaned off 10% heavier than the average of the group. Or, a 90% birth weight ratio means the bulls BW was 10% lower than the average of the group.

CED - Calving Ease Direct

CED is based on calving ease scores and birth weights and is measured on a percentage. CED EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CED of 6 and sire B has a CEPD of -2, then you would expect on average, if comparably mated, sire A's calves would have an 8 percent more likely chance of unassisted calving when compared to sire B's calves.

BW - Birth Weight

The difference between a 3 BW EPD and a 6 BW EPD if those bulls were used on 100 head of cows there would be an average of THREE POUNDS MORE birth weight on average out of the bull with a 6 BW EPD.

WW - Weaning Weight

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves

YW - Yearling Weight

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

SC - Scrotal Circumference

The AHA's new SCF EPD is a prediction of a cow's ability to continue to calve from three years of age through 12 years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the 10 possible calvings to 12 years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age 12 than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

SCF - Sustained Cow Fertility

The AHA's new SCF EPD is a prediction of a cow's ability to continue to calve from three years of age through 12 years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the 10 possible calvings to 12 years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age 12 than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

MM - Maternal Milk

The MM EPD of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

M&G - Maternal Milk & Growth

The M&G EPD reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of the daughter's progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10lb. (29 minus 10=19lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

UDDR - Udder Suspension

Higher number the better.

TEAT - Teat Size

Higher number the better.

MARB - Marbling

The higher the number the more likely the bull to sire calves with higher quality grade and therefore more likely to grade prime.

BMI\$ - Baldy Maternal Index

The BMI\$ is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

CHB\$ - Certified Hereford Beef Index

The Certified Hereford Beef Index (CHB\$) is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows where all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight and Marbling to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. In addition, there is a positive weighting for Rib-eye Area and a negative weighting for Back Fat to maintain desirable Yield Grades. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

GE EPD's will be available soon on yearling bulls

KA-CHING.

MORE POUNDS.
MORE CALVES.
MORE PROFIT.

Hereford.org | 816-842-3757

Hereford bulls increase net profit by \$51 per cow per year.

That's \$20,000 in additional revenue for a typical 400-cow outfit, thanks to increased fertility and herd size.

Herefords are also the efficiency experts, proven to add value to calves in the feedyard — \$30 per head in profitability.
