Contact Dan, Keith or any of the sale staff if you are unable to attend the sale or if you have any questions regarding the cattle.

Welcome!

Welcome to our annual sale,

The bulls that we will be selling represent two different calving intervals meaning we run two different cow herds, one at the north end of the ranch and one at the south. The north end of the ranch calve in February through March and the bulls produced from this group of cows are what make up the yearling bulls in the sale. The cows running the south end of the ranch calve the end of March through the end of May and the bulls produced by these cows are the two-year-old bulls in the sale.

The yearling bulls are weaned in October, processed and started on a mild grower ration to ensure longevity. The two-year-old bulls selling leave the yards and go to pasture as soon as the grass has greened up and stay out on a section of pasture in the hills with zero supplement throughout the summer until mid fall when we bring them in closer and begin feeding them for the sale. The strong survive when we talk about the two-year-olds as they are on their own from May until October.

We run our operation with the same expectations as any good commercial operation and that is to keep inputs to a bare minimum and demand maximum output. These cattle have to be easy fleshing, sound structured, great footed and are to be able to raise a calf that will push down the scale in the fall with a minimal labor force.

We search out the best herd bulls in the breed to ensure our customers have access to breed leading genetics. Horned or polled, if you are seeking to raise feeder cattle that demand a premium, bulls to raise top replacements, genetics to increase the value of your purebred operation or to simply add longevity and profit margins then FECR is your source for the rancher's kind.

If you are unable to be here in person to view the bulls please call any of us to discuss them and we will help you get what you are after.

From all of us here at Fawcett's Elm Creek Ranch thank you for your consideration.

Fawcett's Elm Creek Ranch

**Yearling bulls and heifers have
GE EPD's listed in catalog**

The Registered Hereford Heifers

The yearling heifers are good representation of our replacements with a few added highlights from our embryo transplant group. The ET heifers in this group were meant to be kept to continue the legacy of their mothers here at the ranch since these females are usually sold in our October sale. But since we decided to offer yearling heifers we thought it would be good to spice up the offering just a bit. All the way through the offering you will find high quality females with will work in many different scenarios. Their EPD's in the catalog are GE-EPD's.

The Yearling Hereford Bulls

The yearling bulls come predominately from the group of cows calving mid February through mid March. These bulls have been on a high roughage ration at a low MCAL to ensure longevity. We want our bulls to be able to work hard and last years without any problems. You will find many 1/2 and 3/4 brothers in this offering to help you to have a consistent calf crop. Most all of the bulls in this group are the result of Artificial Insemination. Carcass data will be available on sale day. If there are any questions on pedigrees or any other information you are interested in please ask. Their EPD's in the catalog are their GE-EPD's.

The 2-year-old Hereford Bulls

We are excited about this years group of two-year-old bulls. This group of bulls predominately come from the second group of cows calving from mid March through May. In this group of cows you will find calves sired by AI sires and the bulls resulting from embryo transplant. This group of bulls leave the yards as soon as the grass has greened in the spring and are on their own until fall without supplement where the strong survive, and then are fed a high roughage ration out on pasture where they have room to travel. They are sound, hard in their condition and ready to work and last.

The Yearling Commercial Hereford Heifers & Yearling F1 Baldy Heifers

We take a lot of pride in the cow herd and these Hereford and F1 baldy replacement heifers are from the heart of the 2022 calf crop. They are the right kind, the right size, maternally enhanced females to become front pasture momma cows.

VOLUME DISCOUNT

Bulls 3% on three head; 4% on four head; 5% on five or more

HERD HEALTH

All of the cattle selling will be ready for immediate shipment and accompanied by proper health certificates.
Fawcett's Elm Creek Ranch has a full vaccination program.

TERMS & CONDITIONS

This will be a video auction. All animals will be penned outside. All animals will sell to the highest bidder with the auctioneer settling any disputes as to bids. Announced changes in catalog information will take precedence over any printed material in catalog. The animals become the property of the highest bidder as soon as sold and will be cared for, for a reasonable time, at buyer's risk.

BREEDING GUARANTEE

All bulls will be guaranteed through the first 60 day breeding season. In the event, an animal fails to breed, a suitable replacement will be made or credit will be given in the next sale.

PEDIGREE

All registered animals in the sale are clean of any genetic defects to the best of our knowledge. All potential genetic defect carriers have been DNA'd and will have a profile on file with the AHA. The registered bred heifers have been DNA'd and will be pro-filed for ET permits.

LIABILITY

All persons attending the sale and related functions do so at their own risk. Fawcett's Elm Creek Ranch, the sale management and staff assume no liability, legal or otherwise, for any accidents or injuries that may occur.

RETAINED OWNERSHIPS

We will retain a percentage of several of the bulls and the registered heifers. Terms will be announced sale day.

ABSENTEE BIDS

Any person unable to attend can place a bid through Keith or Daniel or any of the listed sale representatives. Please have credit references available.

DELIVERY

Free delivery on bulls to central location within bordering states if delivered by Fawcett's Elm Creek Ranch. We will cooperate on deliveries outside that area.

INSURANCE

Martin-Trudeau Insurance, Mitchell, South Dakota will be available on sale day to handle insurance needs. Amy Puepke 605-770-4414.

CATALOG EPD's were pulled December 23rd, 2021

Hereford Breed Averages

CED	BW	WW	YW	Scrotal	SCF	MILK
2.9	2.8	54	87	1.0	15.8	26
M&G	UDDER	TEAT	REA	MARB	BMI\$	CHB\$
53	1.2	1.2	0.41	0.11	342	115

Angus Breed Averages

CED	BW	WW	YW	Milk	\$W	\$F
6.0	1.2	60	107	26	56	86
\$G	\$B	Marb	REA	Fat		
47	134	0.55	0.57	0.012		

EPD's are to be utilized as a tool in your selection process to better understand what to expect in certain aspects from your bull. Below you will find a quick explanation to help you better understand what you will find in this catalog.

LE PIG and RE PIG represent the percentage of pigment on each eye.

When referring to ratios throughout the catalog: 110% weaning weight ratio means this bull weaned off 10% heavier than the average of the group. Or, a 90% birth weight ratio means the bulls BW was 10% lower than the average of the group.

CED - Calving Ease Direct

CED is based on calving ease scores and birth weights and is measured on a percentage. CED EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CED of 6 and sire B has a CEPD of -2, then you would expect on average, if comparably mated, sire A's calves would have an 8 percent more likely chance of unassisted calving when compared to sire B's calves.

BW - Birth Weight

The difference between a 3 BW EPD and a 6 BW EPD if those bulls were used on 100 head of cows there would be an average of THREE POUNDS MORE birth weight on average out of the bull with a 6 BW EPD.

WW - Weaning Weight

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves

YW - Yearling Weight

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

SC - Scrotal Circumference

The AHA's new SCF EPD is a prediction of a cow's ability to continue to calve from three years of age through 12 years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the 10 possible calvings to 12 years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age 12 than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

SCF - Sustained Cow Fertility

The AHA's new SCF EPD is a prediction of a cow's ability to continue to calve from three years of age through 12 years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the 10 possible calvings to 12 years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age 12 than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

MM - Maternal Milk

The MM EPD of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

M&G - Maternal Milk & Growth

The M&G EPD reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of the daughter's progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10lb. (29 minus 10=19lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

UDDR - Udder Suspension

Higher number the better.

TEAT - Teat Size

Higher number the better.

MARB - Marbling

The higher the number the more likely the bull to sire calves with higher quality grade and therefore more likely to grade prime.

BMI\$ - Baldy Maternal Index

The BMI\$ is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

CHB\$ - Certified Hereford Beef Index

The Certified Hereford Beef Index (CHB\$) is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows where all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight and Marbling to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. In addition, there is a positive weighting for Rib-eye Area and a negative weighting for Back Fat to maintain desirable Yield Grades. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

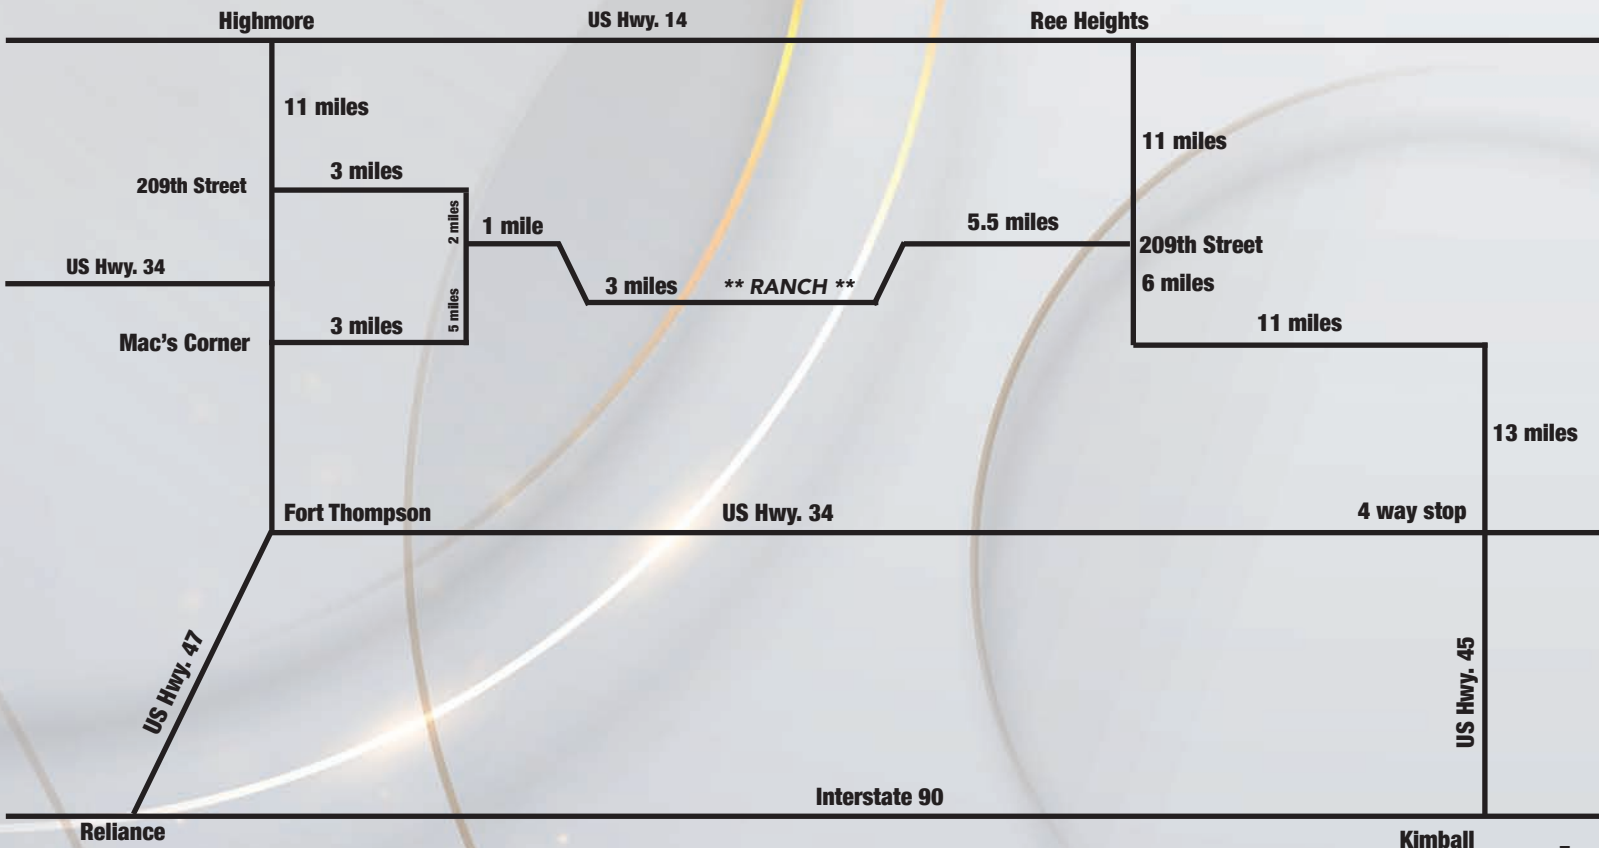

Yearling bulls and heifers have GE EPD's listed in catalog

365 DAY WEIGHT • 837 lbs.

Heifers were lot tagged as they came through the chute but what a way to start off with a heifer that we think has a tremendous amount of potential. Sired by the calving ease professional that we have kept quiet but has been stamping his offspring here at the ranch with extra power and mass in a moderate package. This female is sure to do big things just like her mother who is a direct daughter of Endure. She came light at 93% and weaned heavy at 108% when compared to her contemporary group.

365 DAY WEIGHT • 820 lbs.

Born light and weaned off with a whopping 114% weaning ratio. Mother has history of having babies with well below average birthweights and weaning them off all well above average. I think that's a bit of what we all are after. Add to it the added quality in phenotype this heifer offers and she sets her new owner up for a bright future with this young female.

I've been watching this heifer since day one. All summer I kept questioning if it was worth it to sell her in October or if she needed to stay here. All of the heifers in the fall sale are ET calves and mated specifically to be junior projects. This one being a natural calf gave me another excuse to keep her. Her mother has been marked as a future donor as long as she's able to prove herself as a cow and her first calf puts her on track to do just that. Now she's on this sale. Don't miss this opportunity. She won't be your biggest cow but I bet she will be one of your most powerful producers.

I hear it from people every year that they are wanting to find a sleeper due to budget limitations or whatever it might be, well this one isn't a sleeper but this might be an opportunity to buy an extremely high quality heifer in a different sale setting. PAY ATTENTION HERE, 2453 is a full sister to the Lot 3 heifer from our fall sale. She is a maternal sibling to Grace's heifer showed this past summer, to Hollis's heifer and to many many high sellers and winners. She was brought to the barn but has a spot in her eye so it seemed like a logical excuse to keep her right here at home. She was then weaned and taken back to grass and then came in a bit light since she was on her own. When compared to her sister who was a sale highlight in October this heifer is more extended, flatter shouldered and deeper bodied. This heifer is bold sprung and super attractive. Tator Tot daughters are not abundant. Do not miss this opportunity. Make her a show heifer if you like but she needs to be in serious consideration for a future donor. She might not be ready to show yet early this summer but I'd suggest coasting her along and come into next fall/winter with a fresh one. Retaining embryo interest to be equal partner with buyer(s). Got a little windy on this one.

These Sancho daughters are special. They all follow that same great feminine look like they should but then offer some of those extras, such as added rib shape, depth of body and eye appeal. This heifer is definitely a favorite of the offering. She's got all the goods from Sancho with added substance that she is sure to pass on. She is middle framed and easy fleshing. Her mother had sale highlights the previous year in October and was mated for more replacement type females utilizing Sancho with no intentions of selling these daughters. And... here she is.

2398 ties up some of the elites in the breed very close all the way through her pedigree. 4075B, donor 21W, 2296, donor 212, Sancho, donor 4406, L18, donor 0028 (Bob's mother) and Harland. All the way through there are elites which set this female up to have a very productive future. Red eyed and short marked. Genetically and phenotypically she reads like a herd bull raising machine and the kind you'll keep every daughter out of.

Yes she has a bit bigger BW EPD than ideal but what comes with that is absolute power. Power in phenotype, power on paper and a powerful future. WW, YW are in top 1%, Scrotal top 5%, Milk top 1%, Milk and Growth top 1%, Carcass Weight top 1%, REA top 1%, Marbling top 10% and just shy of top 1% CHB. Mate her to a lower birthweight bull and reap all the benefits she has to offer.

This heifer has a birthmark that covers her tail and the other side of her hind quarter. This is a really good heifer on her own and has a ton of potential as a cow. Has a great spread on paper and should have a really nice udder and teat size once in production. But to be honest with the birthmark I thought she would be a great candidate to be owned by a youngster or a spouse that would be able to find their cow easily amongst the herd. Valentines day present?

Just a May heifer that is the result of natural service that I had been watching all summer with consideration of putting her in our October sale but since all of those heifers were ET calves it gave me an excuse to keep her. A bit different pedigree that is very intriguing compared to a lot of mainstream genetics giving this female unlimited mating options. This isn't one that's easy to sell.

THE BALD-FACED TRUTH ABOUT HEREFORD GENETICS

7%

**Higher pregnancy
rates**

\$51

**More per cow,
per year**

\$30

**Advantage in feedlot
profitability**

\$20

**Advantage in feed
efficiency**

Hereford genetics maximize the value of your herd by leveraging traits such as fertility, feed efficiency, docility and feedlot profitability to your advantage.
