— EST. 1946 —

*64th Annual
Bull & Female Sale*

MONDAY, FEB. 21, 2022 • PRESIDENT'S DAY
AT THE RANCH NEAR HOVEN, SD

Greetings Cattlemen,

Welcome to the 64th Annual Sale at Rausch Herefords! We sincerely hope that this catalog finds you well and optimistic about the future of the cattle industry. We are excited to present our sale offering this year and display the powerful genetic program which has been built and refined for 64 years. Our summer breeding program utilizes over 40 of the breed's best herd bulls. We carefully select bulls to compliment the strengths and weaknesses of the cows in each breeding group. Our program not only takes the EPDs and pedigree into serious consideration, but we also ensure every herd bull proves himself by evaluating the actual performance of his offspring in the herd. This allows us to present the most proven genetics to our customers.

As many of you know, the mama cows make this herd. This past year, we participated in Mizzou's Puberty and Fertility Project in which we enrolled our replacement heifers. We are excited to utilize this information to continually improve our selection process. Creating Dams of Distinction remains a priority because efficient, fertile, and productive females are the foundation of the most successful cow herds. Our cows are managed with very low inputs. Similarly, the calves never see creep feed and are weaned in mid-October and grown on a mild grower ration to ensure longevity. The spring two-year-old bulls are born in the late calving group in April/May. They are slowly grown on a high roughage diet through the first winter and graze the following summer. This ensures they will be rugged, athletic breeding bulls for your program.

The heifer selection runs extra deep this year. The offering includes a dispersion of Gary Rausch's replacement heifers. In memory of Gary, his family is offering two, \$500 sale credit towards purchasing a heifer. Two grants will be awarded at the start of the auction. To qualify, the bidder must be under 21 years old and registered to bid sale day.

Thank you for your interest in our program. If you have any questions, please give us a call. We're happy to help you find the best fit for your program. If you can't attend the sale, you can bid over the phone or online at DVAuction.com or The Livestock Link. We hope to see you sale day!

Sincerely,
The Rauschs

Family Tradition

Peter, Vern & Sharon, Kaitlyn & Michael, Sue & Shannon, Christine & Jacob, Vicki & Jerry

Rausch Herefords recently welcomed more owners to the growing family business. We are determined to continue the rich legacy of Hereford cattle and develop a further diversified cattle business that will help improve the bottom line of our customers. When you buy from Rausch Herefords, you are supporting new, young families within the business.

Recognizing the Best

Why Dams of Distinction are Crucial to the Success of our Herd

A cow receiving the Dam of Distinction honor is a cow that meets the highest standards of commercial cattle production. The cow must do her job, but also her owner must manage the herd correctly to give her the opportunity to excel. Only a few active cows are recognized. All heifers have the potential to be a Dam of Distinction, but only a small percentage fit the job description of an ideal cow year in and year out.

Females attaining the Dam of Distinction status are recognized with “DOD” after their names.

To Qualify, a Cow Must Have:

- Weaned a calf born since Jan. 1, prior to the qualifying year.
- Produced at least three calves.
- Initially calved at 30 months of age or less.
- Had an interval between the first and second calves of no greater than 400 days. In addition, a 370-day calving interval must have been maintained after her second calf. The longer initial calving interval allows breeders to calve 2-year-old heifers prior to the mature cow herd.
- Had weaning records submitted to the AHA Whole Herd Total Performance Records (TPR™) Program for every calf produced that was born before June 30 of the qualifying year.
- Had a progeny average 205-day adjusted weaning weight ratio of at least 105.

DOD = Dam of Distinction

Dam qualified for Breed's Efficiency Test

Sale Details

INSURANCE

Rausch Herefords will pay ½ of the premium for mortality and/or injury insurance for one year if purchased at the time of settlement on sale day. Martin-Trudeau Insurance will be on hand sale day for your livestock insurance needs.

RAUSCH GUARANTEE

All animals are guaranteed as sound and healthy breeders for their first breeding season. All animals failing to breed must be diagnosed by a veterinarian and returned at buyer's expense.

DELIVERY

Rausch Herefords is offering free delivery for all animals sold throughout SD and ND. Receive a \$50 discount per bull and \$15 per heifer if you haul your own on sale day. Leave your animals here for \$3/day feed cost. For coordinating delivery nationwide, ask us for assistance.

2021 SALE DAY - THANK YOU TO ALL OUR CUSTOMERS!

Remembering Gary

In the last 35 years, Gary Rausch, 62, contributed a significant number of cattle to our annual sale offering. Last August, while checking his cows, Gary was involved in a fatal vehicle accident. His family, friends and cows filled his life.

Our memories of working with Gary and sharing in his life go back a long way. Not only did Gary work hard to improve his cowherd, his whole family took part in it with him, each contributing in their unique way. We marveled at his talent for remembering every cow and her progeny of several years back in his herd.

Over the years, we enjoyed his ability to bring a lightheartedness to the work days and anticipated his coming to help at sale time. His gift for conversation, humor and good-natured teasing were witnessed while going to bull sales, delivering cattle and when visiting with our customers and will be greatly missed. He always had a positive attitude that made you feel like everything will be alright.

We miss Gary and extend our heartfelt condolences to Twila and all of his family.

Understanding Hereford EPDs

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 17 traits and calculates three profit indexes. AHA's genetic evaluation makes use of a Marker Effects Model that allows the calculation of EPDs by incorporating the pedigree, phenotypic and genomic profile of an animal. Animals that have a genomic profile will be denoted with a GE-EPD logo.

The current suite of Hereford EPDs and profit indexes includes:

Calving Ease — Direct (CE)

CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average, if comparably mated, sire A's calves would have an 8 percent more likely chance of unassisted calving when compared to sire B's calves.

Birth Weight (BW)

BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average, if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

Weaning Weight (WW)

WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

Yearling Weight (YW)

YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

Dry Matter Intake (DMI)

The DMI EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B's progeny, if comparably mated, to consume on average 1 pound of feed less per day.

Scrotal Circumference (SC)

Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a 0.7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm.

Sustained Cow Fertility

The AHA's new SCF EPD is a prediction of a cow's ability to continue to calve from three years of age through 12 years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the 10 possible calvings to 12 years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age 12 than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

Maternal Milk (MM)

The MM EPD of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Milk & Growth (M&G)

The M&G EPD reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of the daughter's progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

Maternal Calving Ease (MCE)

MCE EPD predicts how easily a sire's daughters will calve at two years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Mature Cow Weight (MCW)

The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. For example, if sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if comparably mated, to be 15 lb. heavier at mature size.

Udder Suspension (UDDR)

UDDR EPDs are reported on a 9 (very tight) to 1 (very pendulous) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

Teat size (TEAT)

TEAT EPDs are reported on a 9 (very small) to 1 (very large, balloon shaped) scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment.

For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

Carcass Weight (CW)

CW EPD is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

Rib Fat (FAT)

The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs, are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Ribeye Area (REA)

REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling (MARB)

MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, [IMF]) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Baldy Maternal Index (BMIS)

The BMIS is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

Brahman Influence Index (BIIS)

The BIIS is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed towards a commodity beef market since Certified Hereford Beef® does not accept Brahman influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers that use Hereford bulls on Brahman influenced cows.

Certified Hereford Beef Index (CHBS)

The Certified Hereford Beef Index (CHBS) is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows where all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight and Marbling to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. In addition, there is a positive weighting for Rib-eye Area and a negative weighting for Back Fat to maintain desirable Yield Grades. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

Introducing Four New Sire Families

VALORS

The Valors are top end selected and top selling sons of JDF Victor 719T 33Z. They add balanced high performance to the Rausch Herd Bull Battery.

KILOS

The Kilo sires are adding generations to the Anodize Family. They have been selected from top performing and top selling herds from throughout the Midwest. They combine eye appeal, calving ease along with great growth traits.

HORIZONS

The Horizons all have New York sires in their pedigrees. They too were selected as top performers and top selling bulls from top herds in the Midwest. They exhibit volume and fast growth traits along with high carcass traits.

ENTRUSTS

The Entrusts all have Trust sires in their pedigrees. They are adding more and more performance and eye appeal to the Herd bull battery. Be sure to check out their progeny

Within each family, there are commonalities.
