

# STROH HEREFORD RANCH

*36th Annual Ranch-Ready Production Sale*

**THURSDAY, FEBRUARY 5, 2026**

**1:00 p.m. (MT) • At the Ranch**

# Dear Cattlemen and Women:

WOW—what a year it has been. It began with uncertainty as dry conditions had many producers contemplating hard decisions to get through the summer. Then, in mid-May, the faucet turned on and stayed on, bringing much-needed relief across the country. The summer followed with record feeder calf prices, a pullback tied to political pressure in October, and a market correction before Christmas. Regardless of those swings, it is an exciting time to be in the beef industry—and to own the factory: good mama cows.

We believe this strong market has some staying power. If we could predict exactly when the next consistent downturn would come, we'd be holding the sale somewhere in the tropics. Since we can't, the best way to protect and advance your operation—no matter the market—is to invest in bulls that will move your cow herd in the right direction and deliver value for years to come.

This year's sale bulls tell that story. They were born into a mild spring and transitioned into a dry summer full of grass, hoppers, flies, and dust—real-world conditions. With the help of good mothers, they grew into solid calves. After weaning, a mild winter allowed them to develop naturally into rugged, ranch-ready two-year-old bulls. They went to grass in June, were cake-broke, and received Amiferm Range Pro Mineral along with 25-12 Flaxlic tubs throughout the summer. In August, we introduced a light grain ration in preparation for the Montana Hereford Tour. Ahead of the tour, they were brought into the lot for display and fed millet hay, grass hay, and a light grain ration. Following the tour, they were turned back out to the grass to avoid mud until clipping was completed. Since early November, the bulls have been in the lot on a steady, moderate ration of Powerboost, silage, hay, and Gordy Steffans' bull developer.

This feeding program demonstrates our bulls' ability to gain and express their phenotypic power—without pushing them. These bulls have not been fed for Denver or the butcher shop. They are developed with one goal in mind: to best serve the commercial cow-calf producer.

We are also proud to offer another solid group of commercial-grade bred heifers. These females were range-raised and handled the challenging conditions of the Missouri Plateau well. They went to grass in May, were cake-broke, and received Edi salt blocks throughout the summer. On July 2, the heifers were sorted into breeding pasture and exposed to two Angus heifer bulls sourced from Ficek Cattle Company of Manning, ND, and Ellingson Angus of St. Anthony, ND. Pregnancy checking was completed in December by Dr. Chance Noyce of Circle C Veterinary Service.

Bull videos were recorded in late December 2025 and are expected to be available on Livestock Link in early January.

As always, the bulls will be on display the afternoon before the sale and on sale day. If you would like to stop by ahead of time to sort through the offering, the coffee is always on, and you are welcome anytime. We sincerely thank our past customers for their continued support and look forward to visiting with you—whether at the ranch, on the phone, or down the road.

We hope to see you on sale day.

# STROH HEREFORD RANCH 2026

## 36th Annual Ranch-Ready Production Sale

### THURSDAY, FEBRUARY 5, 2026

1:00 p.m. (MT) • At the Ranch • Join us for a free lunch

**Selling:** 52 Horned and Scurred Coming Two-Year-Old Bulls

15 Bred Commercial Hereford Heifers (Bred to Black Angus Bulls)

7 F1 Baldy Heifers from Stroh Hereford Ranch

30 F1 Baldy Heifers from Guest Consigner; Sorenson Ranch (Watford City, ND)

#### AUCTIONEER:

Scott Weishaar ..... 701-872-5299 • Cell: 701-426-6826

#### SALES REPRESENTATIVES:

Jill Hotchkiss, Hereford America ..... 605-490-1409

Marc Hotchkiss, The Livestock Link ..... 605-210-1956

Aaron Friedt, American Hereford Association ... 701-590-9597

Kevin Murnin, Western Livestock Journal ..... 406-853-4638

Scott Dirk, Tri-State Livestock News ..... 605-380-6024

#### SPECIAL GUESTS:

North Dakota Hereford Association President: Dan Donnelly

North Dakota Hereford Queen: Mika Stuber

North Dakota Hereford Princess: Hailey Klym

**TERMS & CONDITIONS:** All cattle will be sold to the highest bidder without reserve. The terms of the sale will be cash. The auctioneer will settle any dispute as to bids.

Each animal will become the property of the buyer as soon as sold. Cattle will be cared for a reasonable length of time after the sale, at the buyer's risk. Announced changes in catalog information sale day, take precedence over printed material in this catalog. Everyone attending this sale does so at his own responsibility and risk, and without liability on the part of the owner or his employees.

**GUARANTEE:** All bulls of breeding age are guaranteed breeders. If an animal fails to breed after a trial of six months, it may be returned to the seller at buyer's expense. The seller reserves the right to try said animal for six months and if it proves a breeder to return it to the station of buyer at seller's expense. If the animal proves to be a non-breeder it will be replaced with an animal of equal quality or credit will be given for next years sale.

We assume no liability legal or otherwise to make any further compensation to the buyer no other warranty of any nature is expressed or implied.

Extreme care has been taken in copying each pedigree to avoid errors. We are not to be held responsible for any error which might appear and which is beyond our control in the printing of the catalog.

**DELIVERY:** Deliveries will be made on purchase of \$4000 or more to central points up to 400 miles. We will cooperate with buyers on delivery of all cattle regardless of number or distance. No delivery provided for heifers.

**ABSENTEE BIDDING:** Anybody wishing to bid that cannot attend the sale may place a phone bid by contacting any listed sales representative, (Aaron Friedt, Scott Dirk, Kevin Murnin and Jill Hotchkiss), Mike Stroh, Matt Stroh or Scott Weishaar.

**KILLDEER ACCOMMODATIONS:** Cobblestone Hotel & Suites, 701-764-2200; Mountain View Hotel, 701-764-5843.

We will cooperate with delivery arrangements or take \$100.00 (per bull) off if picked up on sale day (Bulls only)

**HEREFORDS – THE EFFICIENCY EXPERTS**

Adding Hereford genetics to your herd makes perfect business sense in a cost-driven economy. Excellent conversion, hardiness, fertility, longevity and even disposition can help reduce input costs. These Hereford efficiencies are ideal for your herd, your business and your plans for the future. Low-maintenance cattle, long-term profit. Now that's power.

American Hereford Association • P.O. Box 014059, Kansas City, MO 64101 • (816) 842-3757 • [www.hereford.org](http://www.hereford.org)

**HEREFORD**

## TRAIT DEFINITIONS

The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 17 traits and calculates three profit (\$) indexes.

**CALVING EASE DIRECT (CED)** - CE EPD is based on calving ease scores and birth weights and is measured on a percentage. CE EPD indicates the influence of the sire on calving ease in females calving at 2 years of age. For example, if sire A has a CE EPD of 6 and sire B has a CE EPD of -2, then you would expect on average if comparably mated, sire A's calves would be born with an 8% more likely chance of being unassisted when compared to sire B's calves.

**BIRTH WEIGHT (BW)** - BW EPD is an indicator trait for calving ease and is measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty. The figure in parentheses found after each EPD is an accuracy value or reliability of the EPD.

**WEANING WEIGHT (WW)** - WW EPD is an estimate of pre-weaning growth that is measured in pounds. For example, if sire A has a WW EPD of 60 and sire B has a WW EPD of 40, then you would expect on average if comparably mated, sire A's calves would weigh 20 lb. heavier at weaning when compared to sire B's calves.

**YEARLING WEIGHT (YW)** - YW EPD is an estimate of post-weaning growth that is measured in pounds. For example, if sire A has a YW EPD of 100 and sire B has a YW EPD of 70, then you would expect on average if comparably mated, sire A's calves would weigh 30 lb. heavier at a year of age when compared to sire B's calves.

**DRY MATTER INTAKE (DMI)** - The Dry Matter Intake EPD predicts the daily consumption of pounds of feed. For example, if sire A has a DMI EPD of 1.1 and sire B has a DMI EPD of 0.1, you would expect sire B's progeny, if comparably mated, to consume on average 1 pound of feed less per day.

**SCROTAL CIRCUMFERENCE (SC)** - Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality, and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty. Yearling sons of a sire with a .7 SC EPD should have yearling scrotal circumference measurements that average 0.7 centimeters (cm) larger than progeny by a bull with an EPD of 0.0 cm. In the Hereford genetic analysis, a multiple-trait model was used for scrotal circumference. Weaning weight was used as a predictor variable to increase the prediction accuracy of SC EPDs. Therefore, an animal with a weaning weight EPD should also have a SC EPD.

**SUSTAINED COW FERTILITY (SCF)** - The AHA's new Sustained Cow Fertility EPD (SCF) is a prediction of a cow's ability to continue to calve from three years of age through twelve years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the ten-possible calving's to twelve years old expressed as a probability. For example, the daughters of a bull with a 30 EPD would have the genetic potential to have one more calf by age twelve than the daughters from a bull with a 20 EPD. In other words, the daughters from the 30 EPD bull would have a 10% greater probability of having one more calf than the bull with a 20 EPD. This is equivalent to saying that the daughters are 10% more likely to remain in the herd to age 12.

**MATERNAL MILK (Milk)** - The milking ability of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. Daughters of the sire with a +14 MM EPD should produce progeny with 205-day weights averaging 24 lb. more (as a result of greater milk production) than daughters of a bull with a MM EPD of -10 lb. (14 minus -10.0 = 24 lb.). This difference in weaning weight is due to total milk production during the entire lactation.

**MATERNAL MILK & GROWTH (M&G)** - Maternal Milk & Growth reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of daughters' progeny weaning weight. A bull with a 29 lb. M&G EPD should sire daughters with progeny weaning weights averaging 19 lb. heavier than progeny of a bull's daughters with a M&G EPD of 10 lb. (29 minus 10 = 19 lb.). It is equal to one-half the sire's weaning weight EPD, plus all of his MM EPD. No accuracy is associated with this since it is simply a mathematical combination of two other EPDs. It is sometimes referred to as "total maternal" or "combined maternal."

**MATERNAL CALVING EASE (MCE)** - MCE EPD predicts how easily a sire's daughters will calve at 2 years of age and is measured on a percentage. For example, if sire A has a MCE EPD of 7 and sire B has a CE EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

**MATURE COW WEIGHT (MCW)** - The MCW EPD was designed to help breeders select sires that will either increase or decrease mature size of cows in the herd. The trait was developed after years of cow weight data collection and the EPD relates directly to the maintenance requirements of a cow herd. An example of how the MCW EPD allows breeders to compare sires: If sire A has a MCW EPD of 100 and sire B has an EPD of 85, then you would expect the females of sire A, if mated to similar cows, to be 15 lb. heavier at mature size.

**UDDER SUSPENSION (UDDR)** - Scores range from 9 (very tight) to 1 (very pendulous) and represent assessments of udder support. Weak udder suspension results in pendulous udders that make it difficult for a calf to nurse. Weak suspension in the udder indicates a lack of support in the ligament that ties the udder to the cow's body wall. Over time, weakness in this ligament will allow the udder to hang down too far from the body and may subject the udder to serious problems and increased potential for injury. UDDR EPDs are reported on the scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a UDDR EPD of 0.4, and sire B has a UDDR EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score better udder suspension in daughters of sire A, compared to sire B.

**TEAT SIZE (TEAT)** - Scores range from 9 (very small) to 1 (very large, balloon shaped) and are subjective assessments of the teat length and circumference. Oversized

teats are difficult for newborn calves to nurse, and the calf may not receive adequate colostrum. This could lead to a higher incidence of scours or decreased immunity levels in the newborn calf. TEAT EPDs are reported on the scoring scale. Differences in sire EPDs predict the difference expected in the sires' daughters' udder characteristics when managed in the same environment. For example, if sire A has a teat size EPD of 0.4, and sire B has a teat size EPD of -0.1, the difference in the values is 0.5, or one-half of a score. If daughters of sires A and B are raised and managed in the same environment, you would expect half a score smaller teat size in daughters of sire A, compared to sire B.

**CARCASS WEIGHT (CW)** - Carcass weight is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight. For example, if sire A has a CW EPD of 84 and sire B has a CW EPD 64, then you would expect the progeny of sire A, if harvested at the same age constant endpoint, to have a 20-lb. advantage in terms of hot carcass weight.

**RIB FAT (FAT)** - The FAT EPD reflects differences in adjusted 365-day, 12th-rib fat thickness based on carcass measurements of harvested cattle. Sires with low, or negative FAT EPDs are expected to produce leaner progeny than sires with higher EPDs. Ultrasound measures are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

**RIBEYE AREA (REA)** - REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

**MARBLING (MRB)** - MARB EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat, (IMF)) based on carcass measurements of harvested cattle. Breeding cattle with higher MARB EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

**BALDY MATERNAL INDEX (BMI\$)** - The Baldy Maternal Index is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed towards Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

**BRAHMAN INFLUENCE INDEX (BII\$)** - The Brahman Influence Index is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed towards a commodity beef market since Certified Hereford Beef does not accept Brahman influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake, but a positive weighting on Carcass Weight which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Rib-eye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers that use Hereford bulls on Brahman influenced cows.

**CERTIFIED HEREFORD BEEF INDEX (CHB\$)** - The Certified Hereford Beef Index is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Rib-eye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

## THE CHB SIRE OF DISTINCTION

The Certified Hereford Beef Sire of Distinction program recognizes Hereford bulls who excel in carcass traits. The American Hereford Association Board of Directors initiated the program in 2007 to recognize superior carcass bulls.

**Qualifications** - To qualify as a Certified Hereford Beef Sire of Distinction, a bull must be in the top 25% for the CHB\$ profit index and have a minimum accuracy level of 30% for both ribeye area (REA) and marbling (MARB) expected progeny difference (EPD). The Certified Hereford Beef Sires distinction is used to recognize sires in the Hereford breed that excel in improving carcass traits. A bull receiving the CHB status will be recognized with CHB after his name when doing an animal or EPD inquiry on [Hereford.org](http://Hereford.org).

We are very excited to have this bull in our program. He brings a lot of length, width and muscling to the table! This guy is a true power house phenotypically and genotypically especially when you take a look at the maternal figures 57 on milk & growth and 27 on milk! We look forward to the impact he will have on our program in the years to come. 6194 has tested free of all genetic defects including Mandibulofacial Dysostosis this was verified through genetic testing in conjunction with the AHA for breed improvement. This will be the last year that this sires progeny will be available.

A tremendous 7088 son that does a lot of things correctly, calves hit the ground, this spring, full of muscle and a lot of go. Looking forward to watching them mature in the coming month's. 0227 expresses phenomenal length, depth and thickness and moves around with tremendous athleticism. He is a true cowboys beef bull that will leave a mark on our program. Co-owned with Johansen Herefords in Castle Dale, Utah.

Breeder bull deluxe. 1J is a deep-bodied, curve-bender bull. With a 77 pound birthweight and an adjusted WW of 805. We look forward to getting this exciting outcross sire here and walking our pastures. 1J is a rugged, soggy, athletic bull that has muscle to burn. We are really looking forward to seeing the first calves this spring. Super Rib 1J is our 2022 pick from XTC Ranches of Eastend, Sask. We feel he will compliment our functional approach to creating cattle for working ranches.

Here is another outcross sire that we have brought in to our program to help compliment the Line 1 genetics we have been incorporating. 63K was our pick out of the 2023 Braun Ranch Production Sale for his style, structure, thickness, and length. He has a good momma cow backing him up and he himself looks to be at home out in the hills covering cows. We look forward to seeing his genetic presence established in our cow herd.

## • COW HERD •

Culling is the key to a successful cow herd, we cull on feet, utters and disposition as well as efficiency. We also have expectations for our momma cows. First and foremost we expect our cows to be able to go out and forage they are not fed any extra feed till the snows deep or the weather gets unbearably cold. Next, we calve out on rangeland, our cows must be able to lay down have their calf and have them up and nursing in a short amount of time. Thirdly, we only have our bulls out for 45-50 days so it is critical that they breed up in that time frame. Finally, we believe a short calving interval puts money into your pocket. Pictured below are some of our momma cows that we believe have been sharpened by iron into true queens of the range.

## • DAMS OF DISTINCTION •

According to The American Hereford Association (AHA), "A cow receiving the Dam of Distinction honor is a cow that meets the highest standards of commercial cattle production. The cow must do her job, but her owner must also manage the herd correctly to give her the opportunity to excel. Only a few active cows are recognized. All heifers have the potential to be a Dam of Distinction, but only a small percentage fit the job description of an ideal cow year in and year out. Females attaining the Dam of Distinction status are recognized with "DOD" after their names on the AHA website."

Stroh Hereford Ranch is pleased to say that we have a number of cows that are recognized by the American Hereford Association as Dams of Distinction. This is a recognition we have strived to achieve over the years because we know at the heart of every successful ranch is a solid cow herd.

## • 2026 BRED HEIFERS •

These bred heifers come straight out of our replacement pen and represent the very top end of what we keep for ourselves. They are deep-bodied, sound, and built to thrive in tough, real-world ranch conditions. This is a uniform, no-excuses set of females who are ready to go to work and stay productive for years to come.

The heifers are bred to Angus heifer bulls, FCC Hickock 306 from Ficek Cattle Company, Manning, ND, and Ellingson Open Range 4744, Ellingson Angus, St. Anthony, ND. All heifers were pregnancy-checked in December, poured, and given a 7-way vaccination by Dr. Chance Noyce of Circle C Veterinary Service. They have been developed with longevity, fertility, and function as the priority from day one.

Since birth, the heifers have received a full line of animal health shots. They have been Bangs Vaccinated and have had their pre-breeding shots.

If you have any questions about this set of heifers, don't hesitate to reach out to Mike (701-290-1191) or Matt (701-690-4860).

### SORENSEN RANCH

The Sorenson family resides just outside of Watford City, North Dakota, where they focus on producing real-world, functional cattle built to thrive in the harsh conditions of the North Dakota Badlands. Their program is centered around rugged, maternally driven genetics, resulting in a consistent, high-quality set of replacement females and feeder cattle year after year.

This year, Sorenson Ranch is proud to consign 30 front-end replacement heifers that are built to go to work and develop into a productive, long-lasting cow herd.
